1. Introduction

1.1 Purpose of the LCP

LCP help tp define every step in the whole process of system development. It record every associated activities from the initial to the final delivery.

1.2 Status of LCP

This is the initial version of LCP. The status of LCP is currently at exploration phase

1.3 Assumptions

- The duration of the project is 12 weeks(Fall 2014)
- There are six on-campus students and a DEN student(IIV&V) in the project team
- There will be winwin negotiation weekly between the team and clients
- ICSM is being used to guide this project

2. Milestones and Products

2.1 Overall Strategy

The system of sharethetraining.com will be developed by strictly following ICSM. The project is to provide a business course sharing website for trainers and professionals. Users of the website will include the professionals who take courses, trainers who provide courses and administer who manage the website.

Exploration phase

Duration: 09/12/14- 09/28/14

Concept: In this phase, collecting and analyzing client's requirements is the priority. By win-win negotiation, fully understand client's expectation, and build a project plan based on it.

Deliverables: Valuation Commitment Package

Milestone: Valuation Commitment Review

Strategy: One Incremental Commitment Cycle

Valuation phase

Duration: 09/29/14- 10/15/14

Concept: In this phase, the team had a win-win negotiation session to identify the win conditions, analyze the detailed requirements, evaluate the risks and prioritize the requirements. After the needs of the clients were clarified and confirmed, certain requirements with comparatively high risks were chosen to be prototyped, in order to control the risks. The prototype included basic UI design and a demo of the payment gateway.

Deliverables: Draft Foundations Commitment Package, Project Effort Reports, Progress Reports, Prototype Report, System and Software Architecture Description

Milestone: Valuation Commitment Review

Strategy: Incremental Commitment Cycles for Architected Agile, Meetings, Prototypes

Foundations phase

Duration: 10/16/14- 10/31/14

Concept: In this phase, the team will assess the project status. The changes in requirements will be analyzed, and corresponding adjustments will be made. COTS will be assessed and development software architecture will be designed. Besides, actual functional prototypes will be built.

Deliverables: Draft Foundation Commitment Package, Bi-weekly Project Report and Plan

Milestone: Development Commitment Review

Strategy: Incremental Commitment Cycles for Architected Agile, Meetings, Prototypes

Development phase – Construction Iteration

Duration: 11/1/14- 11/28/14

Concept: In this phase, a detailed project plan is created. Architectural design of the system will be used to guide the development process. Development team will implement the system based on the previous prototype. Regular meetings will be held to assess the current risks. Test team will test the current project and core capability drive-through will be performed at the end of this phase.

Deliverables: Development Commitment Package

Milestone: Transition Readiness Review

Strategy: Incremental Commitment Cycles for Architected Agile, Development, Tests, Integrations

Development phase – Transition Iteration

Duration: 11/29/13- 12/5/13

Concept: By this phase, the complete and developed system should be ready. Training will be provided. Development team will provide a training plan, and document a detailed user manual. And the functioning software system will be transitioned.

Deliverables: Development Commitment Package

Milestone: Operational Commitment Review

Strategy: Incremental Commitment Cycles for Architected Agile, Training

2.2 Project Deliverables

2.2.1 Exploration Phase

Table 1 Artifacts Deliverable in Exploration Phase

| Artifact | Due date | Format | Medium |

3. Responsibilities

3.1 Project-specific stakeholder's responsibilities

3.2 Responsibilities by Phase

Table 4 Stakeholder's Responsibilities in each phase

| Team Member / Role | Primary / Secondary Responsibility | | | | |
|-------------------------------|--|--|--|--|---|
| | Exploration | Valuation | Foundations | Development- Construction Iteration | Development- Transition Iteration |
| Name: Xiaoting Cai | Primary Responsibility Manage project Take part in requirement analyze Secondary Responsibility Design Life Cycle Plan | Primary Responsibility Manage project Plan prototype Interact with client Secondary Responsibility Update Life Cycle Plan | Primary Responsibility Assign specific task to every teammate Technical support for development Secondary Responsibility Manage client interaction | Primary Responsibility Developing the system . Take care of the user management part Secondary Responsibility Manage client interaction | Primary Responsibility Test the system- black box Train the maintainer Secondary Responsibility Manage client interaction |
| Name: Shubham Gaurs | Primary Responsibility Analyze Requirement Secondary Responsibility Design Life Cycle Plan | Primary Responsibility Analyze Requirement Analyze Use case Secondary Responsibility update Life Cycle Plan | Primary Responsibility Analyze the change of requirement Plan test cases Secondary Responsibility Interact with client | Primary Responsibility Test the system Test case report Secondary Responsibility Interact with client | Primary Responsibility Test the system Secondary Responsibility Interact with client |
| Junfeng Wu | Primary Responsibility Design system Architecture Secondary Responsibility Acquire NDI | Primary Responsibility Design system Architecture Secondary Responsibility Test the feasibility of certain API | Primary Responsibility Functional Prototype development Secondary Responsibility Assess operational concept | Primary Responsibility Developing the system . Take care of Course design Secondary Responsibility Assess operational concept | Primary Responsibility Train maintainer. Secondary Responsibility Fix bugs |
| Yi Ding | Primary Responsibility Develop prototype | Primary Responsibility Create mock-ups for the system | Primary Responsibility Develop prototype | Primary Responsibility Track bugzilla, maintain team | Primary Responsibility Develop prototype |

| | | | | | |
|---------------|--|---|---|--|---|
| | Secondary Responsibility Process minutes of meeting | Secondary Responsibility Prototype report | Secondary Responsibility Process minutes of meeting | website Secondary Responsibility Development commitment package | Secondary Responsibility Process minutes of meeting |
| Dongxue Wang | Primary Responsibility Identify project risks Secondary Responsibility Design UI | Primary Responsibility Learn Bootstrap, tailor the UI template Secondary Responsibility Risk analysis | Primary Responsibility Tailor the web template Show UI demo to client Secondary Responsibility Client interaction | Primary Responsibility Developing the system . Take care of UI design Secondary Responsibility Client interaction | Primary Responsibility Tailor the web template Show UI demo to client Secondary Responsibility Client interaction |
| Chao Lin | Primary Responsibility Design system Architecture Secondary Responsibility Acquire NDI | Primary Responsibility Analyze system architecture Secondary Responsibility System and software architecture design | Primary Responsibility Functional Prototype development Secondary Responsibility Assess operational concept | Primary Responsibility Developing the system . Take care of js in the system Secondary Responsibility Assess operational concept | Primary Responsibility Maintain the web server Secondary Responsibility Fix bugs |
| Patrick Horng | Primary Responsibility Identify project risks Secondary Responsibility Report bugs | Primary Responsibility Identify project risks VII&V | Primary Responsibility Identify project risks VII&V | Primary Responsibility Identify project risks VII&V | Primary Responsibility Identify project risks VII&V |
| Stacy Swaite | Primary Responsibility Providing requirements in winwin session Secondary Responsibility Providing necessary materials for the system | Primary Responsibility Interact with the team weekly. Give the team feedback about the prototype Secondary Responsibility Providing necessary materials for the system | Primary Responsibility Interact with the team weekly. Give the team feedback about the prototype Secondary Responsibility Providing necessary materials for the system | Primary Responsibility Interact with the team weekly. Give the team feedback about the system Secondary Responsibility Providing necessary materials for the system | Primary Responsibility Trained by the team. System transition |

3.3 Skills

Table 5 team member's skill

| Team members | Role | Skills |
|--------------|--|--|
| Xiaoting Cai | Project Manager, Life Cycle Planner | Current skills: <ul style="list-style-type: none"> - Languages: JAVA, RUBY - Ruby on Rails - SSH2 - Web development - Database design Required skills: <ul style="list-style-type: none"> - Play framework - H2 databse - Bugzilla |
| Chao Lin | Operational Concept Enginner, Software Architect | Current skills: <ul style="list-style-type: none"> - Language: Javascript, HTML, C/C++ - Agile development experience - Communication Skills Required skills: <ul style="list-style-type: none"> - bootstrap |
| Dongxue Wang | Prototyper | Current skills: <ul style="list-style-type: none"> - Language: C++,C#,JAVA - OpenCV,openGL, openNI - Web and mobile phone UI design - Web security test Required skills: <ul style="list-style-type: none"> - Balsamiq - Bootstrap |
| Junfeng Wu | Operational Concept Engineer, Software Architect | Current skills: <ul style="list-style-type: none"> - Java, Javascript, HTML/CSS - Web development - UML Required skills: <ul style="list-style-type: none"> - Architecture Design - Play framework - H2 Database - Bugzilla |

| | | |
|---------------|--|---|
| | | - Win book |
| Yi Ding | Feasibility Analyst | Current skills: <ul style="list-style-type: none"> - Language: C,C++,C# - SQL Server Database Required skills: <ul style="list-style-type: none"> - COCOMO II - Balsamiq |
| Shubham Gaurs | Requirement Engineer, Life Cycle Planner | Current skills: <ul style="list-style-type: none"> - Language: JAVA,PHO,XML,Javascript - JIRA, Hybris-HMC - Security Testing - Functional Test - Bugzilla Required skills: <ul style="list-style-type: none"> COCOMO II ICSM |
| Patrick Horng | IIV&V | Current skills: <ul style="list-style-type: none"> - Nvidia's Bug Report System(NvBugs) -Teamwork/Communication - Microsoft Office Required skills: <ul style="list-style-type: none"> - Bugzilla - Verify and validate work products |

4. Approach

4.1 Monitoring and Control

- Bi-weekly Progress Report
- Bi-weekly Project Plan
- Weekly team meeting
- Weekly meeting with clients
- Bugzilla
- Commitment Review
- Git to manage the version of our project

4.1.1 Closed Loop Feedback Control

We have created a google group to share materials with each other. We hold a weekly team meeting to discuss what we did and what we should do. Moreover, we keep touch with our client twice a week, by email, call, and so on. And we also use Bugzilla to record every task and every bug we have met. Then we discuss to figure it out.

4.1.2 Reviews

We have weekly meeting with clients to report what we have done and what need improving and changing, and receive her feedback by displaying certain demos.

Bi-weekly project plan and project report are also good reviews.

4.2 Methods, Tools and Facilities

Table 6 methods, Tools and Facilities

| Tools | Usage | Provider |
|----------------|------------------------------------|-----------------|
| Eclipse | IDE for developing the system | Open source |
| GitHub | Tool for version control | Open source |
| Mysql Database | Database for the system | MySQL |
| Bugzilla | Report and Track every task or bug | USC license |
| Coincomo | Cost estimation | USC license |
| Powerdesigner | Tools for UML | SAP |
| Balsamic | Tools for prototyping | Open Source |

Figure 1: COCOMOII Cost Drivers for Scale Factor

5. Resources

- Estimated CSCI577a Effort : 7 team members at 8 hrs/week for 12 weeks
- Total estimated effort – 672 hrs
- Budget information – \$1000
- Project duration – 12 weeks
- Component modules in your development project
 1. User Management
 2. Course Management
 3. Review Management
 4. Order Management
- Programming language used : JAVA

Table 7 COCOMOII Subcomponents

| No. | Module Name | Brief Description | SLOC | REVL |
|-----|-------------------|--|------|------|
| 1 | User Management | Login, registration, profile update and management | 2500 | 5% |
| 2 | Course Management | Course CRUD, Course Arrangement | 2500 | 5% |
| 3 | Review Management | Course-attendees rate course and trainer | 500 | 5% |
| 4 | Order Management | Payment gateway, order info track | 500 | 5% |

Table 8 COINCOMOII Scale Factor

| Scale Driver | Value | Rationale |
|--------------|-------|--|
| PREC | HI | Some teammates have done similar course system before. And there are a lot of open sources online |
| FLEX | HI | There are constraint for payment gateway and server. Other parts are flexible |
| RESL | NOM | The architecture design is not clear enough since requirement may change over time. Number of critical risks 2-4 |
| TEAM | HI | Communication is flexible and we cooperate well |
| PMAT | NOM | CMM Level = 2 |

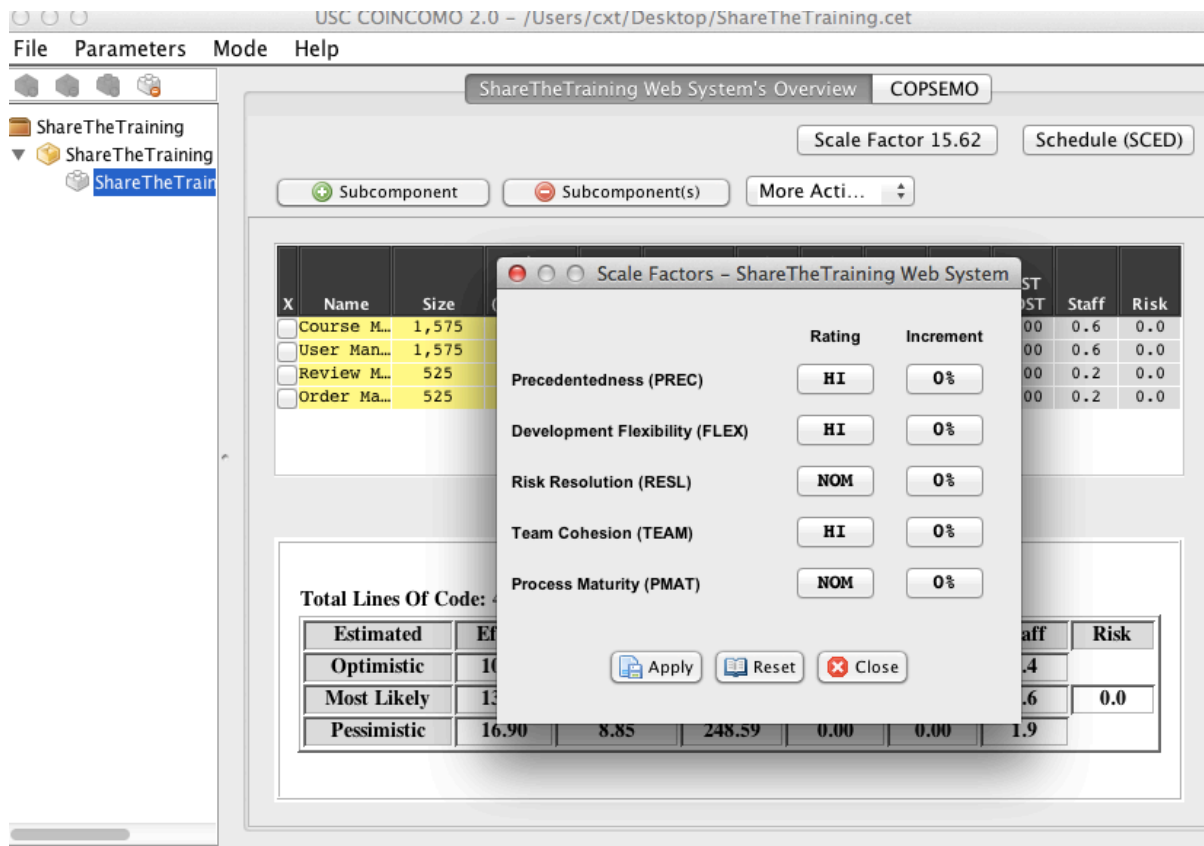

Figure 1: scale factor

Table 9 COCOMOII Cost Driver for Course Management

| Cost Driver | Value | Rationale |
|-------------|-------|---|
| RELY | NOM | The project is relatively reliable. Failure will result in moderate financial loss of client. Easily Recoverable losses |
| DATA | LOW | The system doesn't include a lot of data |
| DOCU | NOM | Right-sized to life-cycle needs |
| CPLX | LOW | The system include front-stage and back-stage. It also should compatible with certain interfaces |
| RUSE | NOM | The project may be reused in the future |
| TIME | NOM | <50% use of available execution time |
| STOR | HIGH | The course may need space to store demo video in the future. 70% use of available storage |
| PVOL | NOM | The selected platforms used in the system is stable. Major:6 mo.;Minor: 2wk |
| ACAP | NOM | The analysts is capable to analyze, design the system, 55 th percentile |
| PCAP | LOW | A lot of teammates lack developing experience in real world, |

| | | |
|------|-----------|--|
| | | 35 th percentile |
| PCON | VERY HIGH | All the teammate will finish this project together. No one will leave |
| APEX | LOW | Most of team members are inexperienced in system development. 6 months |
| LTEX | NOM | Intermediate programming language and tool experience. 1 year |
| PLEX | NOM | Intermediate platform experience. 1 year |
| TOOL | NOM | Basic life cycle tool, moderately integrated. Coincomo |
| SITE | HIGH | All team members are classmates, we also create google group for discussion and info sharing |
| SCED | NOM | The schedule is relatively reasonable and it is little possible for stretch-out or acceleration. |
