# **1. Introduction**

## **1.1 Purpose of the SSAD**

The SSAD serves to document the architecture, and more specifically, the object-oriented analysis and design of the Mission Science 2.0 system. The SSAD is to be used by the builder in building the prescribed system. The system should remain faithful to the prescribed architecture of the SSAD, or the SSAD should be updated to match the latent architecture. The SSAD is used as reference by the maintainers once the system is delivered.

## **1.2 Status of the SSAD**

The SSAD has also been revised to more accurately document the architecture of the system as more information has been discovered. The Artifact diagrams are much more accurate, and directly from the database system with two major views: Student and Project. Grammar has been revised. Use cases are clearer and more correct. General formatting is easier to read. The references to Administrator have been corrected to Coordinator for consistency.

## 2. System Analysis

### 2.1 System Analysis Overview

The primary aim of the Mission Science 2.0 Access Database is facilitate teaching STEM lessons to elementary children. This includes the management of lesson plans, inventory, and tracking the attendance. It also includes reporting on the associations between learning standards and student attendance. The reporting functionality can lead to increased funding opportunities which, in turn, can result in greater capability to teach STEM lessons to students.

#### 2.1.1 System Context

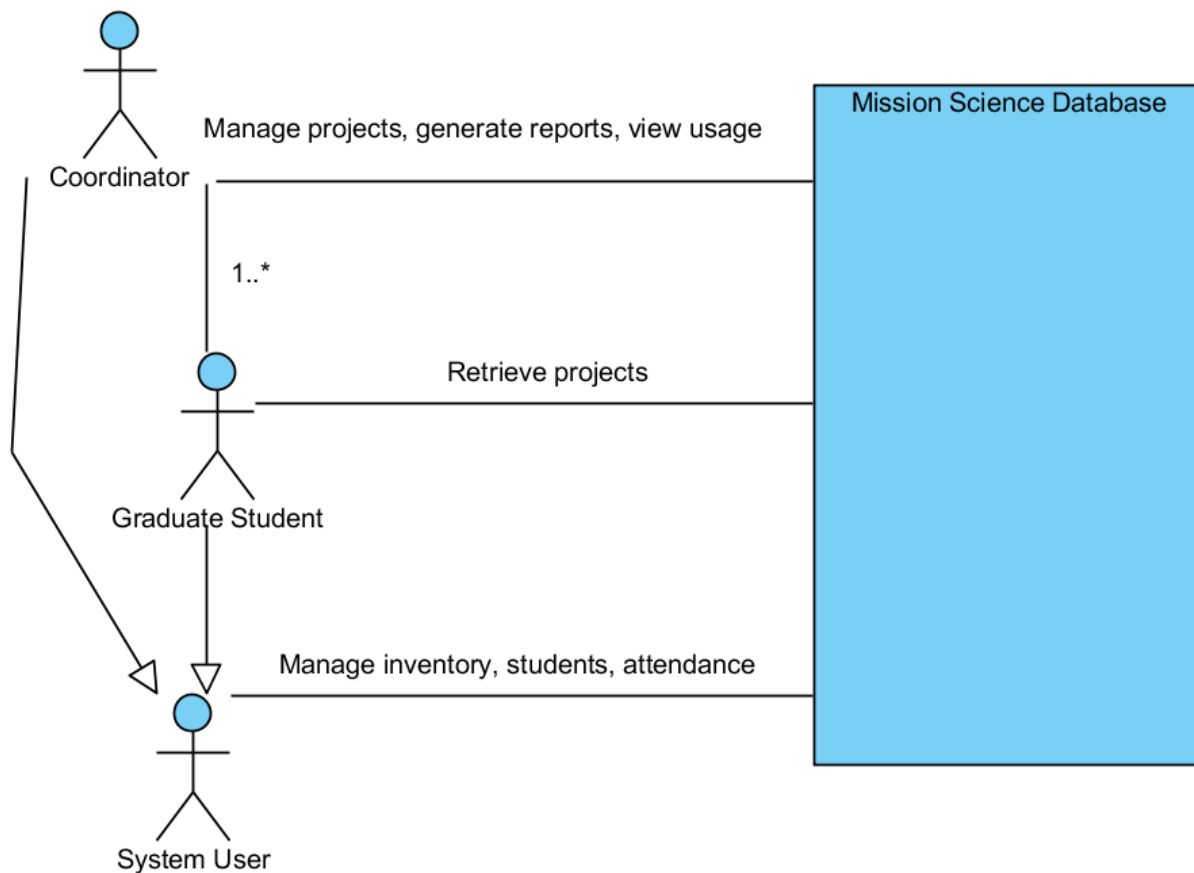

Figure 1: System Context Diagram

**Table 1: Actors Summary**

<b>Actor</b>	<b>Description</b>	<b>Responsibilities</b>
Coordinator	Manager of the database system and coordinator of Mission Science efforts	<ul style="list-style-type: none"><li>• Manage lesson plan data</li><li>• Run reports for funding opportunities</li><li>• Check logs of recent activity</li></ul>
Graduate Student	Viterbi/USC graduate student visits the various STEM school locations to teach the specified lesson plan(s).	<ul style="list-style-type: none"><li>• Execute lesson plans</li><li>• Collect sign-in sheets for attendance</li></ul>
System User	Any user can maintain inventory and aid with data entry of sign-in sheets.	<ul style="list-style-type: none"><li>• Input sign-in sheets</li><li>• Update student information</li><li>• Update inventory in database</li></ul>

### 2.1.2 Artifacts & Information

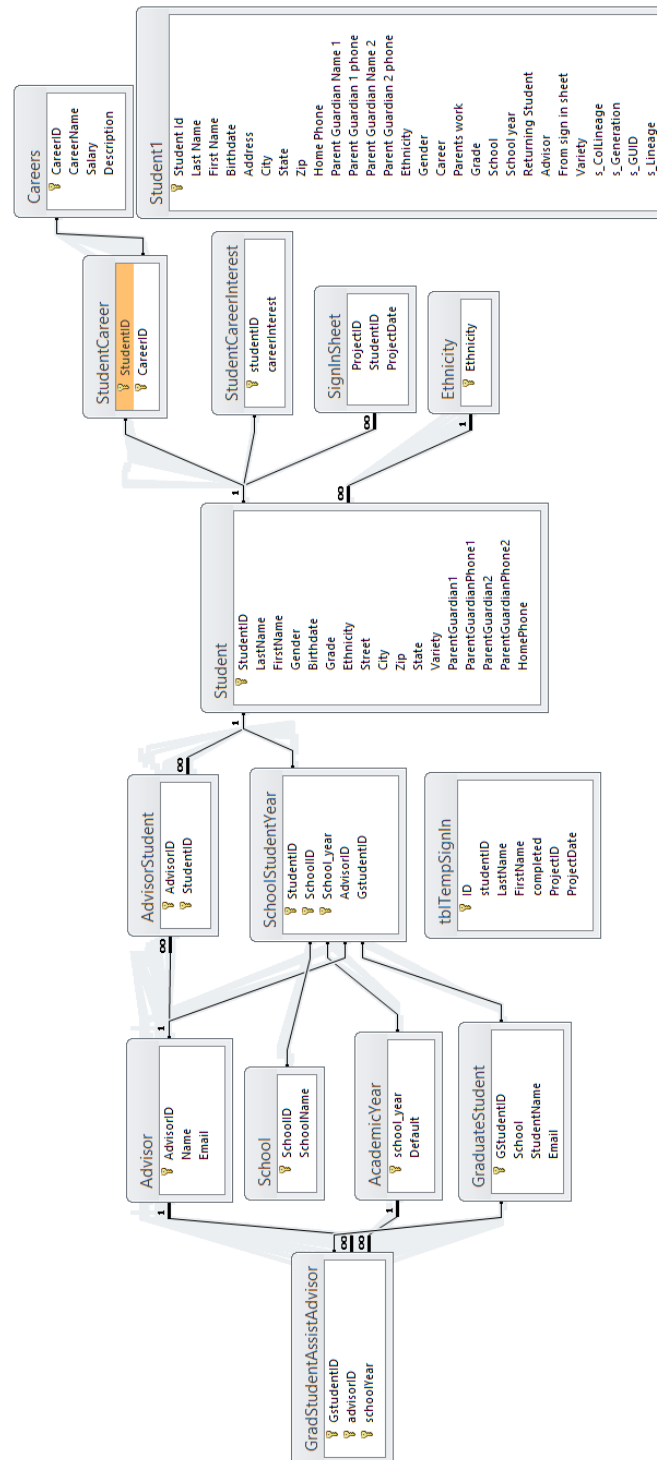

Figure 2: Artifacts and Information Diagram: Student Related

**Table 2: Artifacts and Information Summary: Student Related**

<b>Artifact</b>	<b>Purpose</b>
Student	The Student is the primary artifact, and is associated with the rest of the artifacts through secondary relationships.
Advisor	The advisor is the teacher at the school that is the contact point for Mission Science, to keep order during lessons.
School	The school is associated with the student, and can later be used to enhance reporting abilities.
Graduate Student	The Graduate student teaches the lessons at the school.
Academic Year	Students have information associated for each Academic Year.
Career	Career is used to track relationships between Students and Career options.
Sign-in Sheet	The Sign-in sheet is used to record attendance physically and later in the database, by recording the attendance of each student at a particular Project.

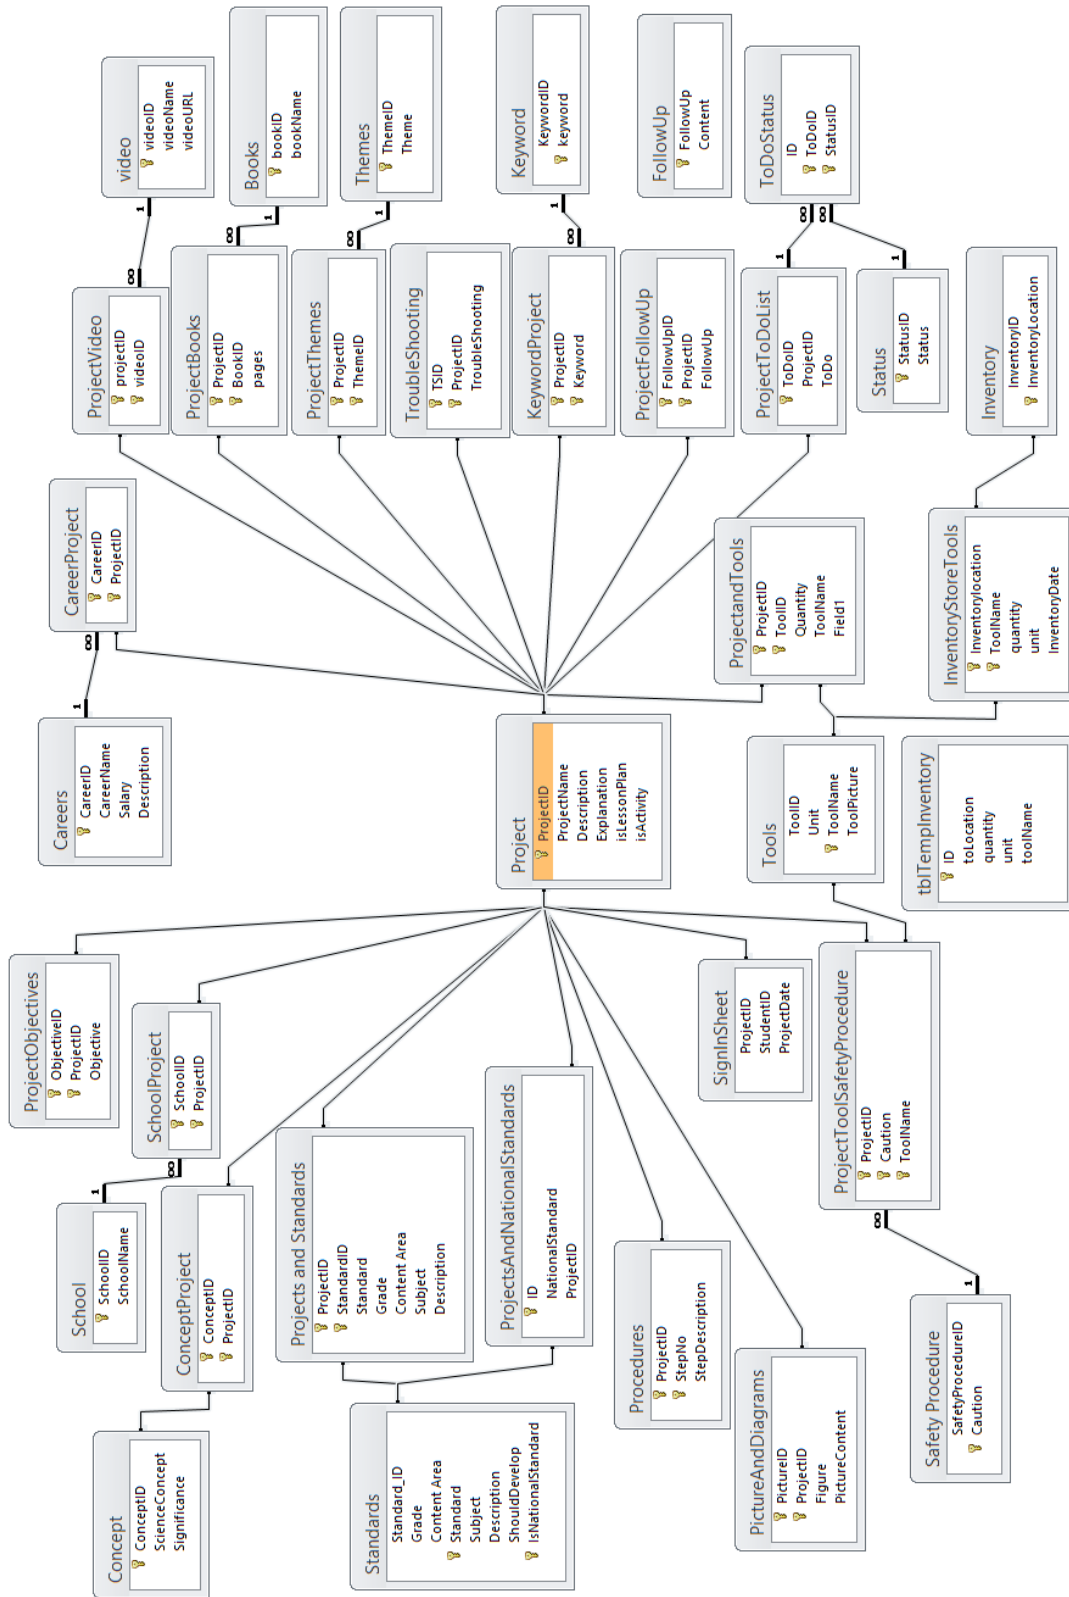

Figure 3: Artifacts and Information Diagram: Project Related

**Table 3: Artifacts and Information Summary: Project Related**

<b>Artifact</b>	<b>Purpose</b>
Project	Project is the primary artifact. It is associated with every other artifact in the diagram through primary and secondary relationships. A Project can be a Lesson Plan or Experiment
School	Projects are held at a school.
Objective	A Project can have a number of Objectives.
Career	A Project can be associated with a number of Careers.
Video	A Project can have informational Videos.
Book	Some Projects are simply references to content in a Book at the Center for Engineering Diversity (Mission Science).
Theme	A Project can have a number of Themes.
Troubleshooting	Troubleshooting is guidance for a Project in case there are problems.
Keyword	Enhancement to searching can allow for better Keyword searching.
Follow Up	Follow up steps to the Project.
Project To Do	To Do items associated with a Project.
Tools (Materials)	All possible tools and materials that are documented.
Inventory of Tools (Materials)	Inventory count (in various locations) of Tools and Materials.
Sign-in Sheet	Attendance of Students at a Project.
Safety Procedure	Certain Safety Procedures are associated with Tools and/or Materials.
Project Picture	Projects can have associated Pictures.
Procedure	The actual Procedure for a Project
Associated Standard	All Projects are aligned to Standards for reporting purposes, to show the value of the Mission Science program and Projects held at Schools.
Concept	Learning Concepts associated with a Project.

## 2.1.3 Behavior

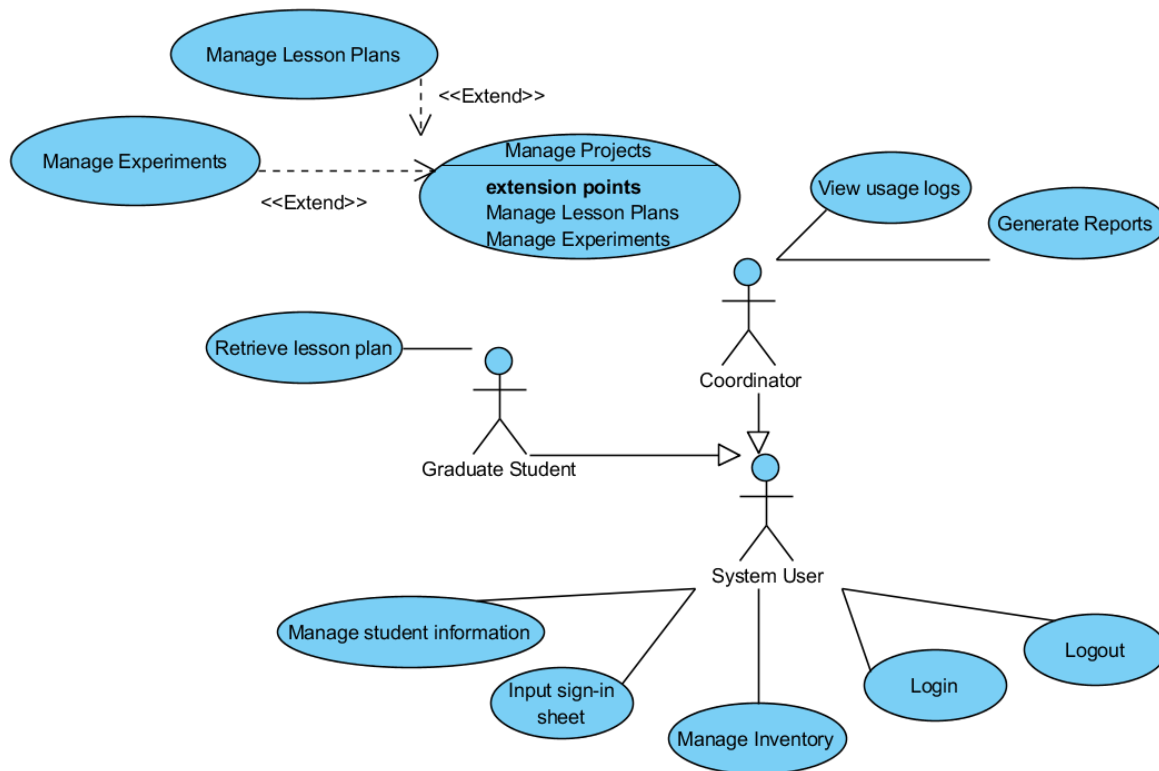

Figure 4: Process Diagram

### 2.1.3.1 System User Behaviors

#### 2.1.3.1.1 Manage student information

Table 4: Process Description

<b>Identifier</b>	UC-1: Manage student information
<b>Purpose</b>	Add and update information about students that attend lessons
<b>Requirements</b>	The user has information about a student to enter in the database
<b>Development Risks</b>	Student information may be incomplete
<b>Pre-conditions</b>	A particular student is not already be in the database. The user is on the add student screen.
<b>Post-conditions</b>	The student will be recorded in the database.

**Table 5: Typical Course of Action: No duplicate student**

Seq#	Actor's Action	System's Response
1	Input details about a student	
2	Click save student	
3		Record the student in the database.
4		Show confirmation of the student is saved.

**Table 6: Alternate Course of Action: similar or identical student prompts entry abort**

Seq#	Actor's Action	System's Response
1	Input details about a student, and the First Name, Last Name, and Birthdate are already in another record.	
2	Click save student	
3		Show there is a similar student in the database, with the same First Name, Last Name, and Birthdate.
4		Prompt user to correct information (unique information) to be able to save the student information.

**Table 7: Exceptional Course of Action: similar student exists, but not the same**

Seq#	Actor's Action	System's Response
1	Input details about a student	
2	Click save student	
3		Show there is a similar student in the database.
4	Decide to save student information because it is a different student.	
		Show confirmation of the student is saved.

### 2.1.3.1.2 Input sign-in sheet

**Table 8: Process Description**

<b>Identifier</b>	UC-2: Input sign-in sheet
<b>Purpose</b>	Record the attendance for a particular lesson taught.
<b>Requirements</b>	The sign-in sheet from the lesson
<b>Development Risks</b>	Each student on the list should be in the database already.
<b>Pre-conditions</b>	All students have been entered into the database. User is on the “Input Sign-in Sheet” screen.
<b>Post-conditions</b>	Attendance for all students is recorded and associated with their profiles.

**Table 9: Typical Course of Action**

Seq#	Actor’s Action	System’s Response
1	Input a student into a list	
2		Verify the student is found
...	Repeat for each student in attendance	
n	Click save attendance	
n+1		Show attendance has been saved

**Table 10: Alternate Course of Action**

Seq#	Actor’s Action	System’s Response
1	Input a student into a list	
2		Student is not found
3	Input student into database	
4	Input student into the list	
5		Verify student is found
...	Repeat for each student in attendance	
n	Click save attendance	
n+1		Show attendance has been saved

### 2.1.3.1.3 Manage inventory

**Table 11: Process Description**

<b>Identifier</b>	UC-3: Manage inventory
<b>Purpose</b>	Keep database of physical inventory up to date to reference for lesson plan requirements
<b>Requirements</b>	Accurate current physical count of inventory
<b>Development Risks</b>	
<b>Pre-conditions</b>	User is on the “Manage Inventory” screen.
<b>Post-conditions</b>	The item will show the accurate count on hand.

**Table 12: Typical Course of Action**

Seq#	Actor’s Action	System’s Response
1	Search for inventory item by name	
2		Show inventory items that match
3	Choose inventory item	
4		Show information about item
5	Change inventory quantity	
6	Click save	
7		Show confirmation

**Table 13: Alternate Course of Action**

Seq#	Actor’s Action	System’s Response
1	Search for inventory item by name	
2		No items returned
3	Click add	
4		Show blank page of inventory about new item
5	Input all information and quantity	
6	Click save	
7		Show confirmation

## 2.1.3.2 Graduate Student Behaviors

### 2.1.3.2.1 Retrieve lesson plan

**Table 14: Process Description**

<b>Identifier</b>	UC-4: Retrieve lesson plan
<b>Purpose</b>	Graduate students should be able to view and print lesson plans to alleviate pressure on the administrator
<b>Requirements</b>	Lesson plans are input into system
<b>Development Risks</b>	
<b>Pre-conditions</b>	There is at least one lesson plan in the system
<b>Post-conditions</b>	The user will be viewing the lesson plan

**Table 15: Typical Course of Action**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Search for lesson plan by subject, science standard, title, or keyword	
<b>2</b>		Show list of matching lesson plans
<b>3</b>	Click on a particular lesson plan	
<b>4</b>		Show lesson plan details

**Table 16: Alternate Course of Action: no matching lesson plan**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Search for lesson plan by subject, science standard, title, or keyword	
<b>2</b>		Show no lesson plans match

### 2.1.3.3 Administrator Behaviors

#### 2.1.3.3.1 Manage projects

**Table 17: Process Description**

<b>Identifier</b>	UC-5: Manage projects
<b>Purpose</b>	Create new or edit existing projects
<b>Requirements</b>	Have the details about a project
<b>Development Risks</b>	
<b>Pre-conditions</b>	Administrator has details for the project to be entered
<b>Post-conditions</b>	The project is recorded in the database

**Table 18: Typical Course of Action: add new project**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Click create new project	
<b>2</b>		Show empty entry form for project
<b>3</b>	Input entry form details	
<b>4</b>	Click save	
<b>5</b>		Show confirmation of save

**Table 19: Alternate Course of Action: find a project to edit**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Search for project by subject, science standard, title, or keyword	
<b>2</b>		Show list of matching project
<b>3</b>	Click on a particular lesson plan	
<b>4</b>		Show project details
<b>5</b>	Edit project details	
<b>6</b>	Click save	
<b>7</b>		Show confirmation of save

### 2.1.3.3.2 View usage logs

**Table 20: Process Description**

<b>Identifier</b>	View usage logs
<b>Purpose</b>	View brief information on what area of the database has had recent activity
<b>Requirements</b>	Administrator needs to view usage of the system
<b>Development Risks</b>	Requires ability to login and record activities as they occur
<b>Pre-conditions</b>	Recent activity has been logged
<b>Post-conditions</b>	Recent activity is displayed

**Table 21: Typical Course of Action**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Navigate to recent activity logs area	
<b>2</b>		Show recent activity logs

### 2.1.3.3.3 Generate reports

**Table 22: Process Description**

<b>Identifier</b>	UC-6: Generate reports
<b>Purpose</b>	Generate reports for longitudinal studies; generate reports to provide to teachers or principals to show the science standards covered; generate reports to show students that have attended but are not in the database as proper students
<b>Requirements</b>	Administrator has a specified data requirement to fill with a generated report.
<b>Development Risks</b>	Minimal: Access offers built-in reporting.
<b>Pre-conditions</b>	At least one report type has been saved
<b>Post-conditions</b>	The report desired will be viewed

**Table 23: Typical Course of Action: Generate Saved Report**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Navigate to reports area	
<b>2</b>	Choose a report to view	
<b>3</b>		Show desired report

**Table 24: Alternate Course of Action: Generate New Report**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Navigate to reports area	
<b>2</b>	Create new report, using built-in Access functionality to choose display fields, formatting, and data options.	
<b>3</b>		Display report as configured.

## 3. NDI/NCS Interoperability Analysis

### 3.1 Introduction

The sole NDI our project is using is Microsoft Access, with versions 2007 and 2010.

#### 3.1.1 COTS / GOTS / ROTS / Open Source / NCS

**Table 25: NDI Products Listing**

<b>NDI/NCS Products</b>	<b>Purposes</b>
Microsoft Access 2007	Database access
Microsoft Access 2010	Database access

#### 3.1.2 Connectors

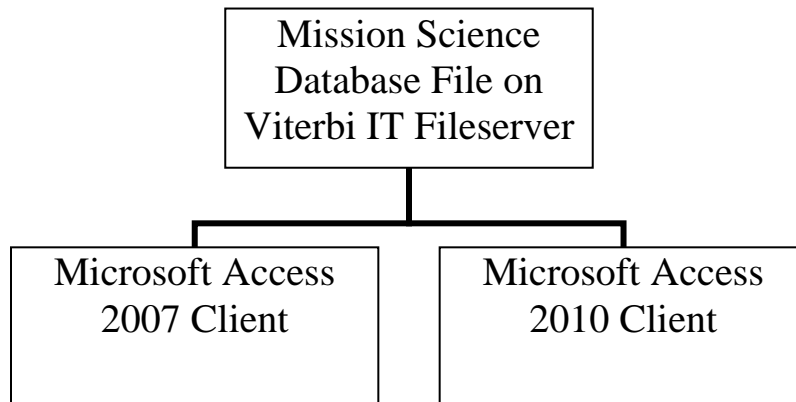

In this project, both Microsoft Access 2007 and Microsoft Access 2010 will be using a Microsoft Access database.

#### 3.1.3 Legacy System

The current system is an Access 2003 file located on a fileserver network share. It is in use by clients with Access 2007 and Access 2010. Due to constraints by Viterbi IT, it cannot currently be migrated from the Access platform.

The legacy system has considerable technical debt from lack of accurate documentation, and gradual undocumented changes to the system. It also displays some Access anti-patterns in development of forms and tables: manually binding in VBA rather than using simple, more manageable functions.

## 3.2 System Structure

## 3.3 Evaluation Summary

**Table 26: NDI Evaluation**

NDI	Usages	Comments
Microsoft Access 2007	Database access	<p>Older version, but still very compatible with many of the new features of Access 2010.</p> <p>Less preferred option, but provides ability to upgrade legacy components that were designed for Access 2003.</p>
Microsoft Access 2010	Database access	<p>More feature available, but constrained by keeping compatibility with Access 2007.</p> <p>Much more preferred option due to better functionality.</p>
