# **1. Introduction**

## **1.1 Purpose of the SSAD**

The purpose of the SSAD is demonstrating the details about the system architecture, software and hardware parts that will be used in the project. The report presents the key properties of the system by analyzing the system context diagram and showing the use cases.

## **1.2 Status of the SSAD**

This is Version 2.1 of System and Software Architecture Description.

## 2. System Analysis

### 2.1 System Analysis Overview

The primary purpose of the PicShare application is to share pictures easier than it is today. With PicShare, users can share pictures in three different ways:

1. Post pictures to the “near-by” location. So everyone in the near by can view these pictures.
2. Post pictures to public events by using a hash tag. In this way, pictures that are related to a certain public event will be put together.
3. Post pictures to a private event. Private events can be set up that only people with password can access them.

#### 2.1.1 System Context

Figure 1: System Context Diagram

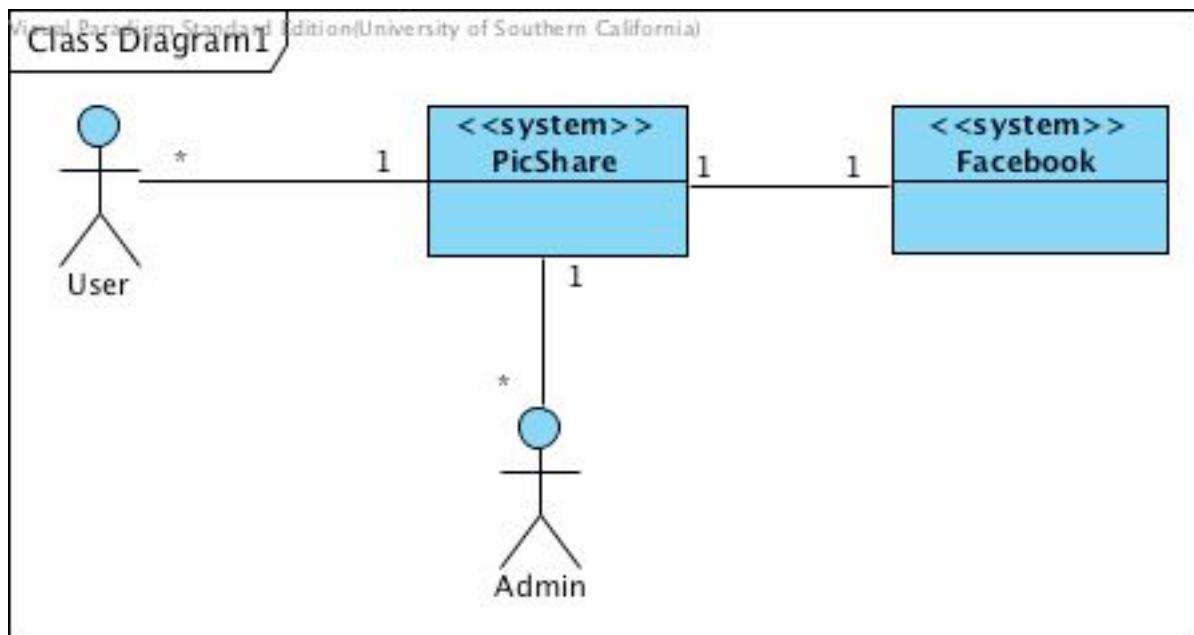

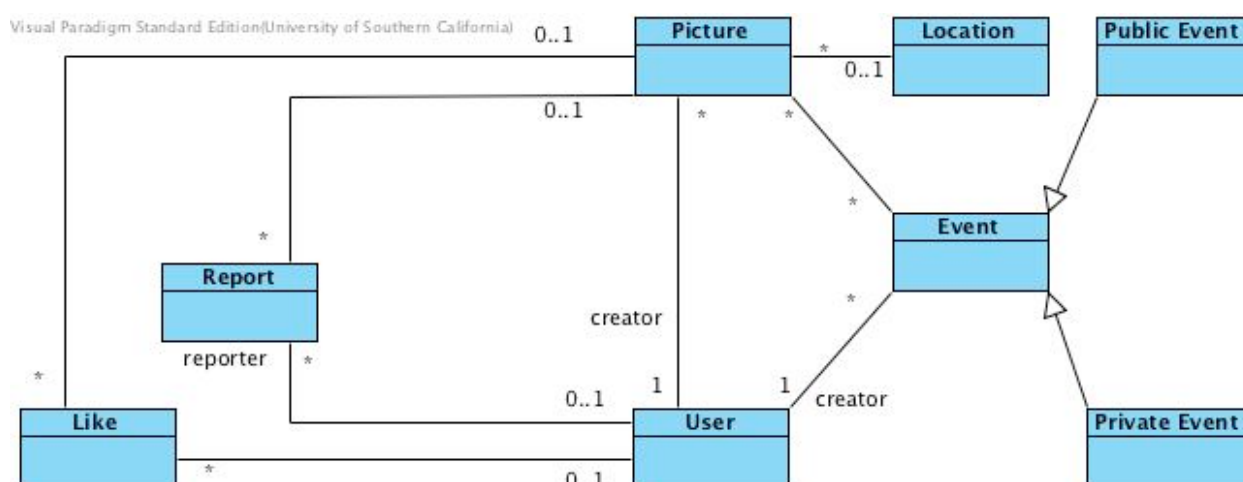

Table 1: Actors Summary

Actor	Description	Responsibilities
User	User of the system.	Sharing picture. Creating public and private event.

Actor	Description	Responsibilities
Admin	Monitors the system	Viewing pictures and events and moderating them to control the whole system.

## 2.1.2 Artifacts & Information

**Figure 2: Artifacts and Information Diagram**

**Table 2: Artifacts and Information Summary**

Artifact	Purpose
Picture	Contains all information about picture, including the picture itself and id indicating the picture.
Location	Contains longitude and latitude for each location.
User	Contains username (email) and password of the user.
Report	Contains information about reporting. That is the user id, picture id and the reason of the report.
Like	Indicates which user has liked which picture.
Event	Contains event name (hashtag) for each event.
Private Event	Indicates the private events and contains password alongside the hashtag.
Public Event	Indicates the public events that will be created by a hashtag.

## 2.1.3 Behavior

Below you can see the process diagram (use case diagram). In the next sections we are going to describe some of the use cases.

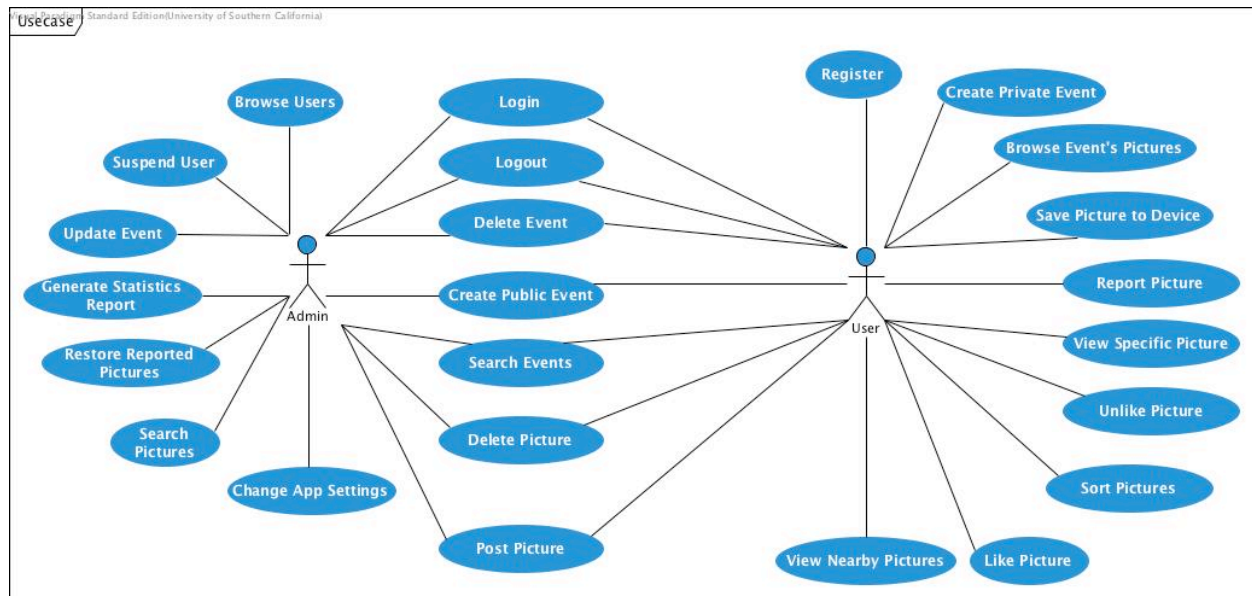

Figure 3: Process Diagram

### 2.1.3.1.1 Process Post Picture

Table 3: Process Description: Post Picture

<b>Identifier</b>	UC-7: Post Picture
<b>Purpose</b>	Allow a user or admin to add a picture to location or hashtag.
<b>Requirements</b>	WC 3579, WC 3619
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User adds a picture to the system.

Table 4: Typical Course of Action- Post Picture: Taking Picture

Seq#	Actor's Action	System's Response
1	User/admin clicks on add a picture button.	
2		System shows different ways to add a picture.

3	User selects “Taking picture” option.	
4		System opens up the camera application.
5	User takes a photo.	
6		System shows the picture and also option to share to a location or hashtag.
7	User chooses location option and clicks submit.	
8		System retrieve user’s location and posts the picture in that location.

**Table 5: Alternate Course of Action- Post Picture: Uploading Picture**

Seq#	Actor’s Action	System’s Response
1-2	Refer to the typical course of action step 1-2	
3	User/admin selects “Uploading Picture” option.	
4		System opens up the gallery application.
5	User/admin selects a photo.	
6		System shows the picture and a text box for user to input the name of hashtag.
7	User/admin enters the hashtag and caption and clicks submit.	
8		System stores the picture with the hashtag and caption.

**Table 6: Alternate Course of Action- Post Picture: Hashtag Option**

Seq#	Actor’s Action	System’s Response
1	Refer to the typical course of action step 1-6	
2	User/admin chooses Hashtag option.	
3		System shows a text box for user to input the name of hashtag.
4	User/admin enters the hashtag and caption and clicks submit.	
		System stores the picture with the hashtag and caption.

### 2.1.3.1.2 Process Delete Picture

**Table 7: Process Description: Delete Picture**

<b>Identifier</b>	UC-8: Delete Picture
<b>Purpose</b>	Allow a user to delete his/her pictures.
<b>Requirements</b>	WC_3591
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User removes a picture that belongs to him/her from the system.

**Table 8: Typical Course of Action- Delete Picture: Confirm**

Seq#	Actor's Action	System's Response
1	User clicks on remove picture button.	
2		System shows a warning to the user to confirm this action.
3	User selects "Ok" option.	
4		System closes the warning and deletes the picture.

**Table 9: Alternate Course of Action- Delete Picture: Cancel**

Seq#	Actor's Action	System's Response
1-2	Refer to the typical course of action step 1-2	
3	User selects "Cancel" option.	
4		System closes the warning and the picture remains.

### 2.1.3.1.3 Process View Specific Picture

**Table 10: Process Description: View Specific Picture**

<b>Identifier</b>	UC-9: View Specific Picture
<b>Purpose</b>	Allow a user to view picture details.
<b>Requirements</b>	WC_3637
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	Details of a specific picture is shown.

**Table 11: Typical Course of Action- View Specific Picture**

Seq#	Actor's Action	System's Response
1	User asks system to show a specific picture.	
2		System retrieves the picture details (picture, location or hashtag, number of likes, a way to like/unlike picture).

#### 2.1.3.1.4 Process Like Picture

**Table 12: Process Description: Like Picture**

<b>Identifier</b>	UC-10: Like Picture
<b>Purpose</b>	Allow a user to like a picture.
<b>Requirements</b>	WC_3751
<b>Development Risks</b>	None
<b>Pre-conditions</b>	<ul style="list-style-type: none"> <li>• User is logged in the system.</li> <li>• User has not liked the picture before.</li> </ul>
<b>Post-conditions</b>	User likes the specific picture.

**Table 13: Typical Course of Action- Like Picture**

Seq#	Actor's Action	System's Response
1	User asks system to like a specific picture.	
2		System stores the like information and new total number of likes is shown to the user.

#### 2.1.3.1.5 Process Unlike Picture

**Table 14: Process Description: Unlike Picture**

<b>Identifier</b>	UC-11: Unlike Picture
<b>Purpose</b>	Allow a user to unlike a picture that he/she has liked before.
<b>Requirements</b>	WC_3751
<b>Development Risks</b>	None
<b>Pre-conditions</b>	<ul style="list-style-type: none"> <li>• User is logged in the system.</li> <li>• User has liked the picture before.</li> </ul>
<b>Post-conditions</b>	User unlikes the specific picture.

**Table 15: Typical Course of Action- Unlike Picture**

Seq#	Actor's Action	System's Response
1	User asks system to unlike a specific picture.	
2		System removes user liking that picture and new total number of likes is shown to the user.

### 2.1.3.1.6 Process Report Picture

**Table 16: Process Description: Report Picture**

<b>Identifier</b>	UC-12: Report Picture
<b>Purpose</b>	Allow a user to report pictures.
<b>Requirements</b>	WC_3599
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User reports the specific picture.

**Table 17: Typical Course of Action- Report Picture: Submit**

Seq#	Actor's Action	System's Response
1	User asks system to report a specific picture.	
2		System shows options that why user thinks the picture is inappropriate and also a submit and cancel button.
3	User selects the option and clicks on "submit" button.	
		System stores the report.

**Table 18: Alternate Course of Action- Report Picture: Cancel**

Seq#	Actor's Action	System's Response
1-2	Refer to typical course of actions step 1-2	
3	User clicks on "cancel" button.	
4		System closes the report page.

### 2.1.3.1.7 Process Save Picture to Device

**Table 19: Process Description: Save Picture to Device**

<b>Identifier</b>	UC-13: Save Picture to Device
<b>Purpose</b>	Allow a user to save a picture to device.
<b>Requirements</b>	WC_3623
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User stores the specific picture in her/his own device.

**Table 20: Typical Course of Action- Save Picture to Device**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User asks system to download a specific picture.	
<b>2</b>		System saves the picture to the user's device.

### 2.1.3.1.8 Process Browse Event's Pictures

**Table 21: Process Description: Browse Event's Pictures**

<b>Identifier</b>	UC-14: Browse Event Pictures
<b>Purpose</b>	Allow a user to view pictures in an event.
<b>Requirements</b>	WC_3637
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User views the pictures in a public/private event.

**Table 22: Typical Course of Action- View Event Pictures**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User asks system to view pictures in a public/private event by writing a hashtag.	
<b>2</b>		System shows the pictures related with the event to the user.

### 2.1.3.1.9 Process Sort Pictures

**Table 23: Process Description: Sort Pictures**

<b>Identifier</b>	UC-15: Sort By Like or Date or location
<b>Purpose</b>	Allow a user to sort pictures by popularity, date or location.
<b>Requirements</b>	WC_3637
<b>Development Risks</b>	None
<b>Pre-conditions</b>	<ul style="list-style-type: none"> <li>• User is logged in the system.</li> <li>• A list of pictures is shown to user.</li> </ul>
<b>Post-conditions</b>	User sorts the picture by popularity, date or location.

**Table 24: Typical Course of Action- Sort By Like, Date or Location**

Seq#	Actor's Action	System's Response
1	User asks system to sort pictures by popularity, date or location.	
2		System sorts the pictures in according to the option user chose.

### 2.1.3.1.10 Process Create Private Event

**Table 25: Process Description: Create Private Event**

<b>Identifier</b>	UC-4: Process Create Private Event
<b>Purpose</b>	Allow a user to create a private event for invited people.
<b>Requirements</b>	WC_3621
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User creates a private event that only invited people can attend.

**Table 26: Typical Course of Action - Create Private Event: With a Picture: Event does not exist**

Seq#	Actor's Action	System's Response
1	User takes a picture and posts it in a private event.	
2		System shows the private event name and

		password fields to user to fill.
3	User fills the private event name field.	
4		System checks presence of the event and warns the user.
5	User fills the password field and clicks “submit” button.	
6		System creates the private event.

**Table 27: Alternate Course of Action- Create Private Event: With a Picture: Event exists**

Seq#	Actor’s Action	System’s Response
1-4	Refer to typical course of actions step 1-4	
5	User changes the name, fills the password field and clicks the “submit” button.	
6		System creates the private event.

**Table 28: Typical Course of Action - Create Private Event: Without a picture: Event does not exist**

Seq#	Actor’s Action	System’s Response
1	User clicks the “create private event” button.	
2		System shows the private event name and password fields to user to fill.
3	User fills the private event name field.	
4		System checks presence of the event and warns the user.
5	User fills the password field and clicks “submit” button.	
6		System creates the private event.

**Table 29: Alternate Course of Action- Create Private Event: Without a picture: Event exists**

Seq#	Actor’s Action	System’s Response
1-4	Refer to typical course of actions step 1-4	
5	User changes the name, fills the password field and clicks the “submit” button.	
6		System creates the private

	event.
--	--------

### 2.1.3.1.11 Process Delete Event

**Table 30: Process Description: Delete Event**

<b>Identifier</b>	UC-5: Process Delete Event
<b>Purpose</b>	Allow admin and a user to delete a private event.
<b>Requirements</b>	WC_3603
<b>Development Risks</b>	None
<b>Pre-conditions</b>	<ul style="list-style-type: none"> <li>User is logged in the system.</li> <li>User is creator of the private event or admin is deleting an event.</li> </ul>
<b>Post-conditions</b>	User deletes a private event with all associated pictures.

**Table 31: Typical Course of Action - Delete Event: Submit**

Seq#	Actor's Action	System's Response
1	User/admin asks system to delete an event.	
2		System shows a warning to the user to confirm this action.
3	User/admin selects "Ok" option.	
4		System closes the warning and deletes the private event with all associated pictures.

**Table 32: Alternate Course of Action- Delete Event: Cancel**

Seq#	Actor's Action	System's Response
1-2	Refer to typical course of actions step 1-2	
3	User/admin clicks on "cancel" button.	
4		System closes the warning and the private event remains.

**2.1.3.1.12 Process Search Events****Table 33: Process Description: Search Events**

<b>Identifier</b>	UC-6: Process Search Events.
<b>Purpose</b>	Allow a user to search the presence of an event.
<b>Requirements</b>	WC_3727
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User searches the presence of an event in the system.

**Table 34: Typical Course of Action - Search Events**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User writes the hashtag of the event to the search box.	
<b>2</b>		System searches the presence of that event and shows the results in the same page.

**2.1.3.1.13 Process Create Pubic Events****Table 35: Process Description: Create Public Events**

<b>Identifier</b>	UC-17: Process Create Public Events.
<b>Purpose</b>	Allow a user to create public events.
<b>Requirements</b>	WC_3621
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in the system.
<b>Post-conditions</b>	User creates a public event that everyone can attend and post pictures.

**Table 36: Typical Course of Action - Create Public Event: With a Picture: Event does not exist**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User takes a picture and posts it in a public event.	
<b>2</b>		System shows the public event name field to user to fill.
<b>3</b>	User fills the public event name field.	
<b>4</b>		System checks presence of the event and warns the user.
<b>5</b>	User makes sure that there is no event created before and clicks "submit" button.	
<b>6</b>		System creates the public event.

**Table 37: Alternate Course of Action- Create Public Event: With a Picture: Event exists**

Seq#	Actor's Action	System's Response
1-4	Refer to typical course of actions step 1-4	
5	User changes the name and clicks the "submit" button.	
6		System creates the public event.

**Table 38: Typical Course of Action - Create Public Event: Without a Picture: Event does not exist**

Seq#	Actor's Action	System's Response
1	User clicks the "create public event" button.	
2		System shows the public event name field to user to fill.
3	User fills the public event name field.	
4		System checks presence of the event and warns the user.
5	User makes sure that there is no event created before and clicks "submit" button.	
6		System creates the public event.

**Table 39: Alternate Course of Action- Create Private Event: Without a Picture: Event exists**

Seq#	Actor's Action	System's Response
1-4	Refer to typical course of actions step 1-4	
5	User changes the name and clicks the "submit" button.	
6		System creates the public event.

### 2.1.3.1.14 Process Browse Users

**Table 40: Process Description: Browse Users**

<b>Identifier</b>	UC-18: Browse Users
<b>Purpose</b>	Allow admin to browse users.
<b>Requirements</b>	WC_3765
<b>Development Risks</b>	None
<b>Pre-conditions</b>	Admin is logged in the system.
<b>Post-conditions</b>	A list of users is shown to admin and he can search users.

**Table 41: Typical Course of Action - Browse Users**

Seq#	Actor's Action	System's Response
1	Admin asks system to display a list of users.	
2		System shows a list of users to admin, alongside a form that admin can use to filter the list.
3	Admin enters information to filter the list.	
4		System displays the new list of users based on the filter form.

### 2.1.3.1.15 Process Suspend User

**Table 42: Process Description: Suspend User**

<b>Identifier</b>	UC-19: Suspend User
<b>Purpose</b>	Allow admin to suspend a user
<b>Requirements</b>	WC_3766
<b>Development Risks</b>	None
<b>Pre-conditions</b>	Admin is logged in the system.
<b>Post-conditions</b>	A user is suspended

**Table 43: Typical Course of Action - Suspend User: Confirm**

Seq#	Actor's Action	System's Response
1	Admin asks system to suspend a user.	
2		System asks admin if he/she is sure about the action.
3	Admin clicks on "ok" button	
4		System suspends the user.

**Table 44: Typical Course of Action - Suspend User: Cancel**

Seq#	Actor's Action	System's Response
1	Refer to typical course of actions step 1-2	
3	Admin clicks on "cancel" button	
4		System cancels the suspending action.

### 2.1.3.1.16 Process Update Event

**Table 45: Process Description: Update Event**

<b>Identifier</b>	UC-20: Update Event
<b>Purpose</b>	Allow admin to change details of an event
<b>Requirements</b>	WC_3770
<b>Development Risks</b>	None
<b>Pre-conditions</b>	Admin is logged in the system.
<b>Post-conditions</b>	Event's details are changed.

**Table 46: Typical Course of Actions - Update Event: Success**

Seq#	Actor's Action	System's Response
1	Admin asks system to update an event.	
2		System retrieves the event and displays a form for changing it.
3	Admin enters event's information and click on "update" button.	
4		System updates the event.

**Table 47: Alternate Course of Actions - Update Event: Error**

Seq#	Actor's Action	System's Response
1		Refer to typical course of action step 1-3
2		System displays errors to admin in order to change the input.

### 2.1.3.1.17 Process Search Pictures

**Table 48: Process Description: Search Pictures**

<b>Identifier</b>	UC-21: Search Pictures
<b>Purpose</b>	Allow admin to search pictures.
<b>Requirements</b>	WC_3767
<b>Development Risks</b>	None
<b>Pre-conditions</b>	Admin is logged in the system.
<b>Post-conditions</b>	List of pictures is displayed to admin.

**Table 49: Typical Course of Actions - Search Pictures**

Seq#	Actor's Action	System's Response
1	Admin asks system to display a list of pictures.	
2		System retrieves pictures and display a list of them to admin. Also generates a form to filter the list based on that.
3	Admin enters form information to filter the list.	
4		System updates the list.

### 2.1.3.1.18 Process Restore Reported Picture

**Table 50: Process Description: Restore Reported Picture**

<b>Identifier</b>	UC-22: Restore Reported Picture
<b>Purpose</b>	Allow admin to restore a reported picture.
<b>Requirements</b>	WC_3774
<b>Development Risks</b>	None
<b>Pre-conditions</b>	Admin is logged in the system.
<b>Post-conditions</b>	A reported picture restores.

**Table 51: Typical Course of Action - Restore Reported Picture**

Seq#	Actor's Action	System's Response
1	Admin asks system to restore a reported picture.	
2		System retrieves pictures and restores is to the system.

### 2.1.3.1.19 Process Change App Settings

**Table 52: Process Description: Change App Settings**

<b>Identifier</b>	UC-23: Change App Settings
<b>Purpose</b>	Allow admin to configure system.
<b>Requirements</b>	WC_3772
<b>Development Risks</b>	None
<b>Pre-conditions</b>	Admin is logged in the system.
<b>Post-conditions</b>	System settings changes.

**Table 53: Typical Course of Action - Change App Settings**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Admin asks system to show the system settings.	
<b>2</b>		System retrieves settings and displays them to admin in a form that admin can change.
<b>3</b>	Admin changes the settings.	
<b>4</b>		System stores the new settings.

### 2.1.3.1.20 Process Generate Statistics Report

**Table 54: Process Description: Generate Statistics Report**

<b>Identifier</b>	UC-24: Generate Statistics Report
<b>Purpose</b>	Admin generates some report about the system.
<b>Requirements</b>	WC_3773
<b>Development Risks</b>	None
<b>Pre-conditions</b>	Admin is logged in the system.
<b>Post-conditions</b>	System settings changes.

**Table 55: Typical Course of Action - Generate Statistics Report**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	Admin asks system	
<b>2</b>		System retrieves settings and displays them to admin in a form that admin can change.
<b>3</b>	Admin changes the settings.	
<b>4</b>		System stores the new settings.

### 2.1.3.1.21 Process Login

**Table 56: Process Description: Login**

<b>Identifier</b>	UC-1: Login
<b>Purpose</b>	Allow a user to log in the system.

<b>Requirements</b>	WC_3583
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User needs an email account or Facebook account.
<b>Post-conditions</b>	User logs in the system.

**Table 57: Typical Course of Action – Login: With Email: Success**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User fills email address and password fields with registered information and clicks the log in button.	
<b>2</b>		System checks if the email address and password match with the registered information in the database and allows user to log in.

**Table 58: Typical Course of Action – Login: With Email: Fail**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User fills email address and password fields with registered information and clicks the log in button.	
<b>2</b>		System checks if the email address and password match with the registered information in the database and returns a proper message.

**Table 59: Alternate Course of Actions - Login: With Facebook**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User clicks the log in with Facebook button.	
<b>2</b>		System directs user to Facebook app and asks him to log in.
<b>3</b>	User logs into Facebook and he is automatically directed to the PicShare app's main screen.	
		System waits for an action from the user.

### 2.1.3.1.22 Process Register

**Table 60: Process Description: Register**

<b>Identifier</b>	UC-3: Register
<b>Purpose</b>	Allow a user to register the system.
<b>Requirements</b>	WC_3583
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User needs an email account.
<b>Post-conditions</b>	User registers the system.

**Table 61: Typical Course of Action – Register: With Email: Success**

Seq#	Actor's Action	System's Response
1	User fills email address, password and confirm password fields and clicks the register button.	
2		System checks the email address in the database and stores the information.

**Table 62: Typical Course of Action – Register: With Email: Fail**

Seq#	Actor's Action	System's Response
1	User fills email address, password and confirm password fields.	
2		System checks the email address in the database and returns a proper message when it finds.

### 2.1.3.1.23 Process Logout

**Table 63: Process Description: Register**

<b>Identifier</b>	UC-2: Logout
<b>Purpose</b>	Allow a user to register the system.
<b>Requirements</b>	WC_3583
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User is logged in.
<b>Post-conditions</b>	User gets logged out.

**Table 64: Typical Course of Action – Logout**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User clicks on the logout button.	
<b>2</b>		System gets user logged out of the system and shows a success message.

#### 2.1.3.1.24 Process View Nearby Pictures

**Table 65: Process Description: View Nearby Pictures**

<b>Identifier</b>	UC-16: Register
<b>Purpose</b>	Allow a user to view the pictures nearby.
<b>Requirements</b>	WC_3761
<b>Development Risks</b>	None
<b>Pre-conditions</b>	User logs in the system.
<b>Post-conditions</b>	A list of pictures is shown to user.

**Table 66: Typical Course of Action – View Nearby Pictures**

<b>Seq#</b>	<b>Actor's Action</b>	<b>System's Response</b>
<b>1</b>	User chooses the radius for browsing pictures in nearby locations.	
<b>2</b>		System retrieves the pictures in a given radius.

## **2.1.4 Modes of Operation**

The PicShare System will not have multiple modes and operate in only one mode, so that no further description is required.

## **2.2 System Analysis Rationale**

We have only one type of operational stakeholder: basically smart phone users between the age of 18-45, but it is not restricted with age. Users will need a smart phone and they must download the application. They also need to create an account to use the application. There is an option to create an account with current Facebook account, or they can create it with an email address and a password.

The PicShare system provides users with the ability to share their picture to a nearby location or in a public event by writing a hashtag. The system allows users to create a private event with a password. So, only invited people can see the event and access it via password. In this way, multiple users at an event will be able to see the pictures taken from others, and they will be able to have the opportunity to download and store the pictures on their own devices.

## 3. Technology-Independent Model

### 3.1 Design Overview

#### 3.1.1 System Structure

Figure 5: Software Component Class Diagram

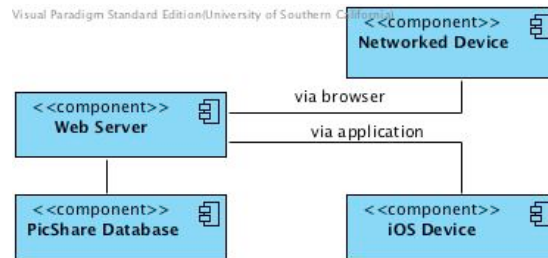

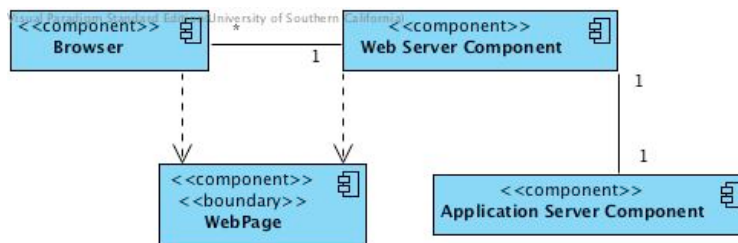

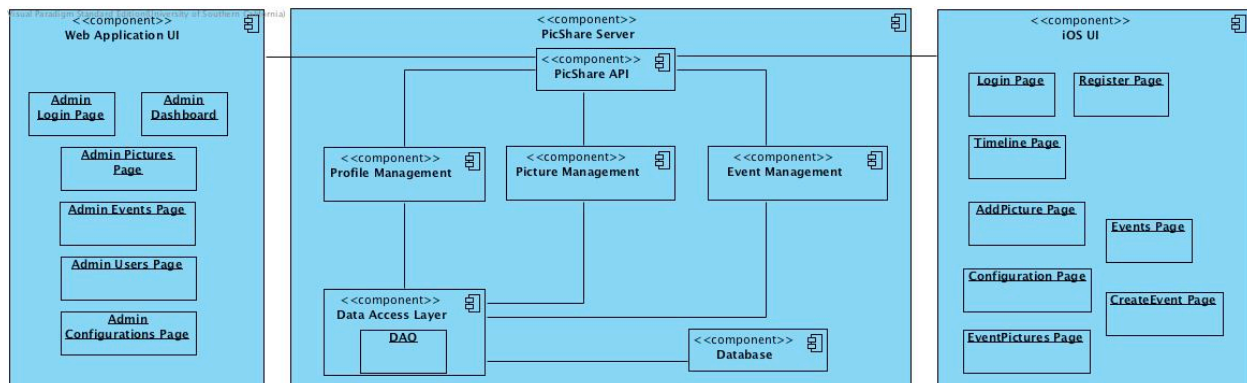

Figure 4: Hardware Component Class Diagram

**Table 67: Software Component Description**

Hardware Component	Description
Networked Device	Any device that is connected to internet. Admin can open browser with that device and connect to admin module.
iOS Device	Devices that users use to connect to system.
Web Server	The server that our server side application will be running on it.
PicShare Database	Database of our system.

**Table 68: Software Component Description**

Software Component	Description
PicShare API	This is the component that UI components have interaction with. It provides a way of connecting to inner components of server.
Profile Management	A component that is used for profile and user management.
Event Management	A component that is used for event management.
Picture Management	A component that is used for picture management.
Data Access Layer	A component that is used for accessing the database. Implementation of all DAOs will be here.
DAO	Data Access Objects classes that are used for connecting to database.
Database	Represents the database of our system.
Login Page	Page for user login in iOS application.
Register Page	Page for user register in iOS application.
Timeline Page	Page for user timeline in iOS application. It contains a list of nearby pictures.
Add Picture Page	Page for adding a picture in iOS application.
Events Page	Page for events list in iOS application.
Configuration Page	Page for changing configurations in iOS application.
Create Event Page	Page for creating event in iOS application.
Event Pictures Page	Page for showing pictures of an event in iOS application.
Admin Login Page	Page for admin login in admin website.
Admin Dashboard	Page for showing an overall statistics in admin website.
Admin Pictures Page	Page for managing pictures in admin website.
Admin Events Page	Page for managing events in admin website.
Admin Users Page	Page for managing users in admin website.
Admin Configurations Page	Page for changing configurations in admin website.

Table 69: Web Framework Component Description

Web Framework Component	Description
Browser	An Internet browser that connects to the Volunteer Tracking System web application and is responsible for displaying Volunteer Tracking System web pages.
Web Server Component	The server component that routes all network traffic and requests between external systems and the application server.
Application Server Component	The server component where the Volunteer Tracking System resides on. All the logical computations are done on this component.
Web Pages	The actual web pages created by the Volunteer Tracking System.

### 3.1.2 Analysis Classes

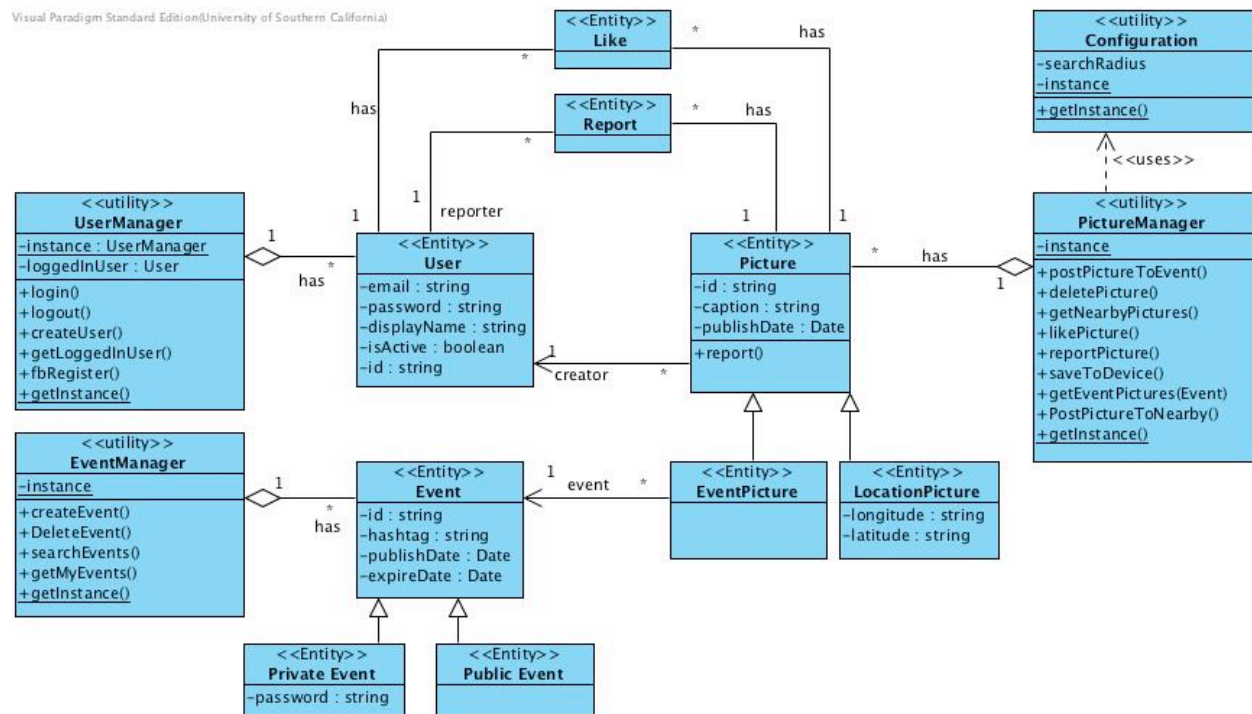

Figure 7: Analysis Class Diagram

**Table 70: Analysis Class Description**

<b>Class</b>	<b>Type</b>	<b>Description</b>
User	Entity	Describes user and stores user information.
Picture	Entity	Describes picture and stores picture information.
EventPicture	Entity	Describes picture that are associated with events and stores their information.
LocationPicture	Entity	Describes picture that have location and stores their information.
Event	Entity	Describes events and stores their information
PrivateEvent	Entity	Describes private events and stores their information
PublicEvent	Entity	Describes public events and stores their information
Like	Entity	Describes like and stores its information. It has relation with user and picture.
Report	Entity	Describes report and stores its information. It has relation with user and picture.
UserManager	Utility	Used for user management. All the functions to manipulate users and add user or delete them are in here.
PictureManager	Utility	Used for picture management. All the functions to manipulate picture and add picture or delete them are in here.
EventManager	Utility	Used for event management. All the functions to manipulate events and add event or delete them are in here.
Configuration	Utility	Stores the configurations that is being used for searching nearby pictures.

### **3.1.3 Process Realization**

In this section we created some sequence diagrams, to demonstrate some features that were not completely clear.

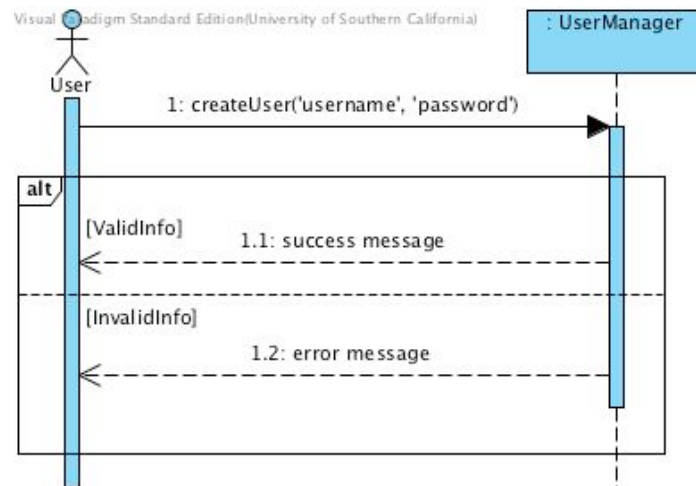

Figure 8: Sequence Diagram - Register with Email

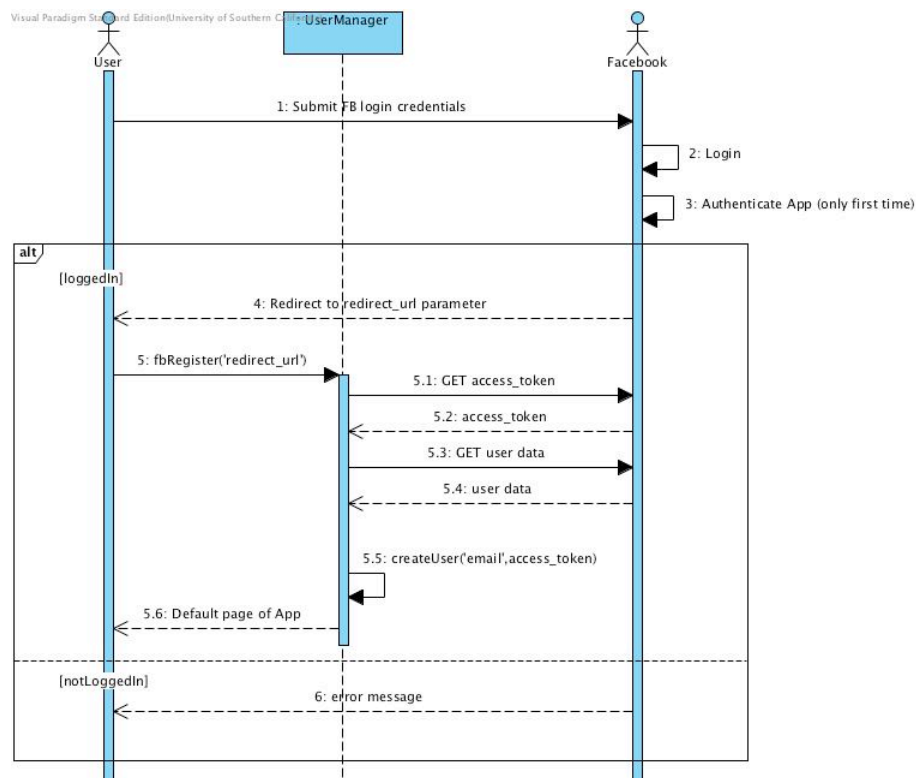

Figure 9: Sequence Diagram - Register with Facebook

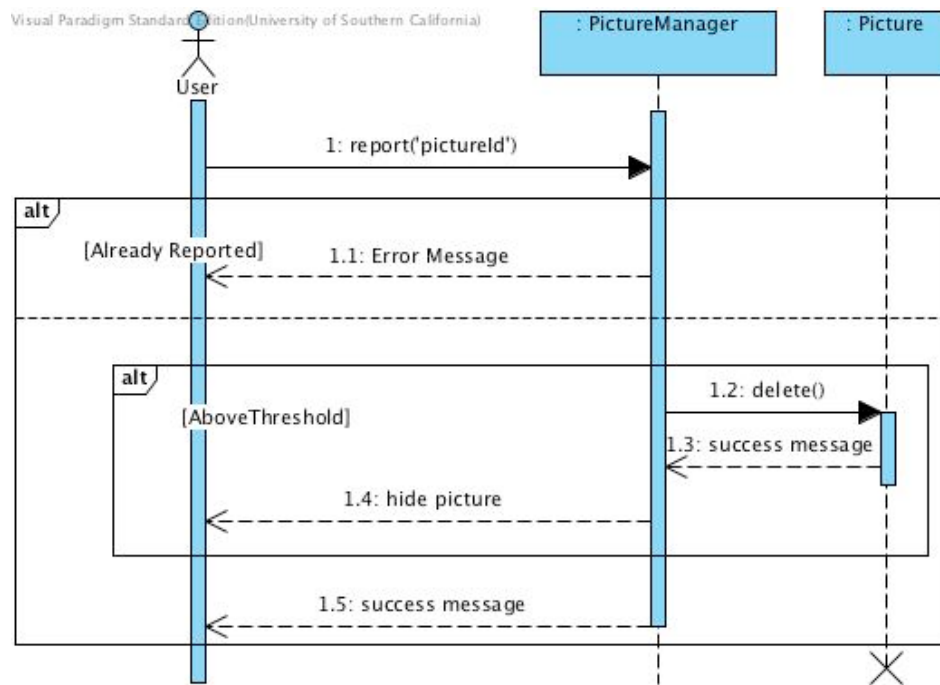

Figure 10: Sequence Diagram - Report Picture

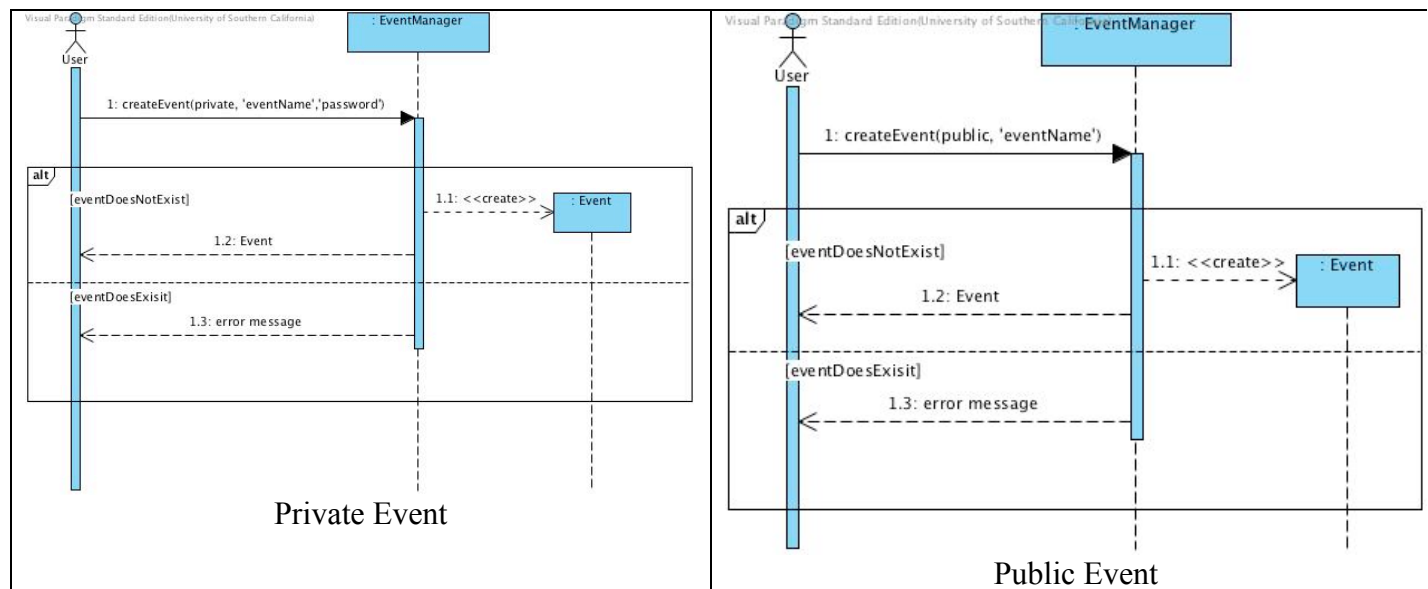

Figure 11: Sequence Diagram - Create Public and Private Event

### 3.1.4 Entity Relationship Diagram

We wanted to make sure that we have a complete understanding of our system, so we decided to create entity relationship diagram.

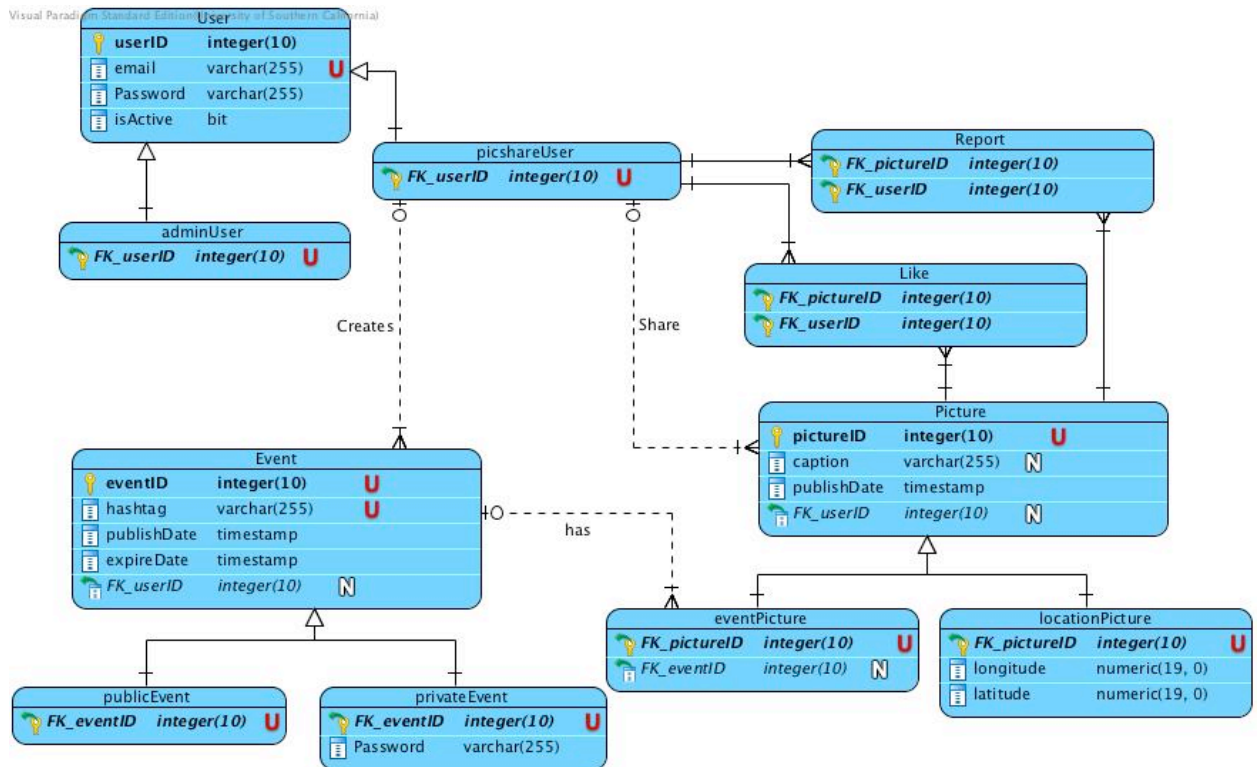

Figure 12: Entity Relationship Diagram

## 3.2 Design Rationale

We adapted three-tier architecture because our app will have basically presentation tier as user interface, application tier as business logic and all functionalities, and data tier as database processes.

- Presentation Tier
  - User Interface component
- Application Tier
  - Profile Management Component
  - Picture Management Component
  - Event Management Component
- Database Management System

The User Interface Component defines all parts of the interface of the application. The user will see main pages and the styles of the application. iOS SDK will provide the foundation tools for this.

The Application Tier includes the class, use case and sequence diagrams that compose the logic of all functionalities for the system. All the business logic will be processed at the background. We chose these diagrams because it's easy to show the relation between processes. With profile management component, the system will be able to create an account for the user by using username and password. Also login and logout functions will be provided to user. Picture management component will include all processes about pictures such as posting a picture, reporting a picture, deleting a picture, saving a picture to device etc. Creating private/public events, deleting private events, saving hashtags are the functionalities for the event management component.

The data tier is the place for storing and retrieving information from a database. It provides access to the data. Retrieved information from the database is passed back to the application tier for processing, then eventually to the end user. We chose to use MySQL because it's widely used and easy to find documentation on the web. It's also compatible with HostGator which we will use for keeping our database files and server.
