1. Introduction

1.1 Purpose of the LCP

The purpose of the LCP document is to make sure our development plan would fit all stakeholder's demand, especially what we will develop for each milestone. In addition, this clarifies all stakeholder's responsibilities. This makes us our development progress manage easily because we know what each of us should do. Finally, this states our approach to assure our code's quality.

1.2 Status of the LCP

This document is the first version of LCP for Foundations Commitment Package.

1.3 Assumptions

- The duration of the project is 24 weeks, which are 12 weeks in Fall 2016 and 12 weeks in Spring 2017.
 - 5 or 6 of our team members will continue the project for next Spring semester
 - i.e. 1 or 2 of us will discontinue
 - Only prototype will be available at the end of 1st semester

2. Milestones and Products

2.1 Overall Strategy

Our Content Management System, Focus, is following Architected Agile process because there is no Non-Development Item or Web service that would fit to most of the core capabilities.

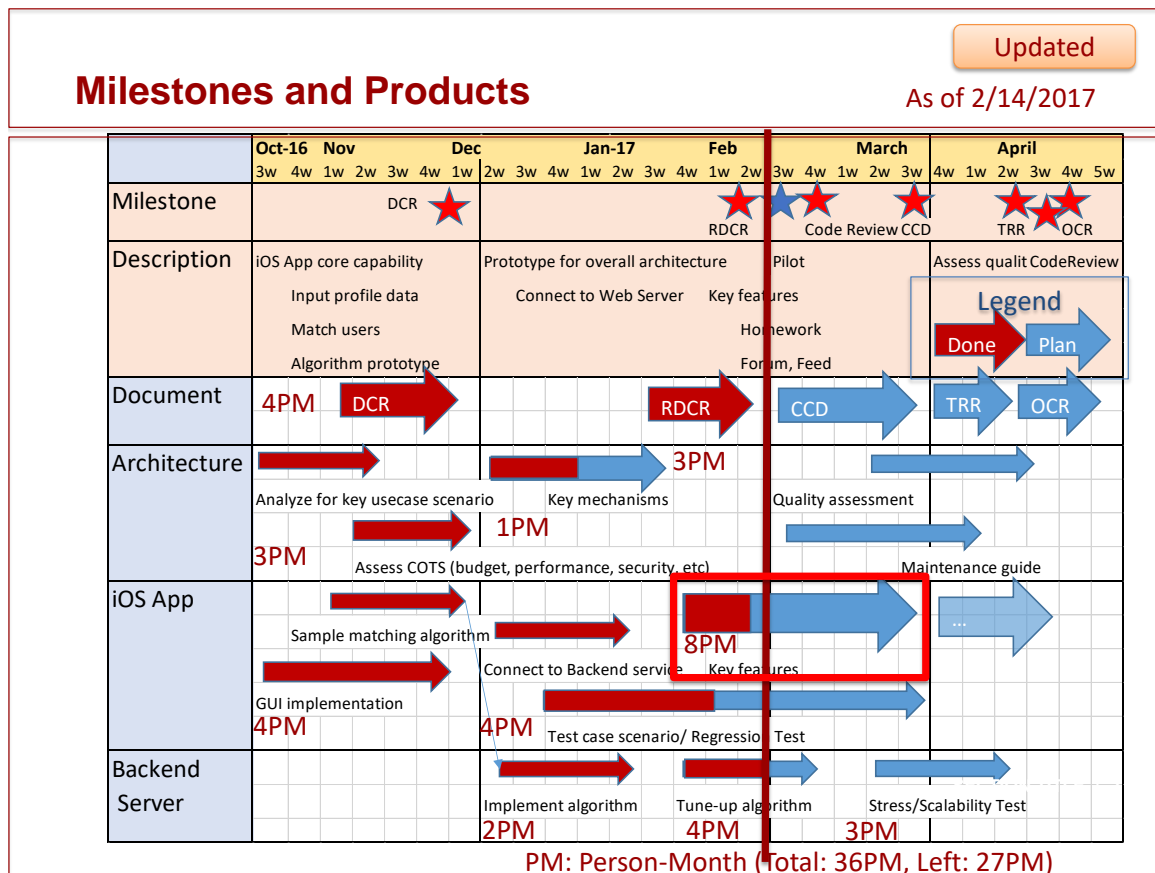

Figure 1 Milestones and Products

Figure 1 shows our development plan for 2 semesters, i.e. 6 more months from as of 10/12/2016. We have five milestones for review. At the same time of each milestone, we are going to incrementally implement our system. Here is the detail:

- Milestone 1: Development Commitment Review
 - We develop sample iOS application which includes the features of input user-profile data, matching users with sample algorithm. It also includes all GUI screen transition. We're going to do this within first semester because one of our members who has a talent of developing iOS app and designing GUI will graduate at this semester.

- Also we develop architecture in this period. We are going to analyze key use case scenarios and assess COTS in detail such as in terms of budget, performance, security , and so on.
- Milestone 2: Rebaselined Development Commitment Review
 - The Second period is the beginning of new semester. So we don't think we can have a lot of time in this period. So we just prepare backend server and connect it with iOS app. We will start to consider test environment as well. We think this will make it easy to develop all features in next semester.
- Milestone 3: Core Capability Drivethrough
 - The Third period is main period for develop key features for our content management system, such as homework, forum, feed, and so forth. It includes Tune-up algorithm that is one of the main features for our system. And I'd like to emphasize here that it might have a risk that it would take a lot more time to implement all features. In some cases, we might not be able to make it for some features.
- Milestone 4: Transition Readiness Review
- Milestone 5: Operational Commitment Review
 - We create maintenance guide, quality assessment including stress/scalability test.

Furthermore, we estimated effort we need for each item in terms of Person Month. Here, we estimated this Person Month value as tailored for our project, in other words, these values are not related COCOMO value (see in 5). The total of the estimated effort, 36 Person Month, might surpass our capability (here, we estimated we have 7 persons * 5 months = 35 Person Month). Therefore, we still need to keep watch the progress and negotiate with clients what we'll finally have to do.

2.2.1 Exploration Phase

Table 1: Artifacts Deliverables in Exploration Phase

3. Responsibilities

3.1 Project-specific stakeholder's responsibilities

Responsibilities			
Name	Key Role (Found. Phase)	Key Role (Dev. Phase)	Skill
Steven Holland	Requirements Engineer	Implementer (iOS)	iOS app development
Arik Oganessian	Software Architect	-	Web Service development
Marco Alvarez	Feasibility Architect	-	Backend SW(e.g. firebase)
Pin-Chih (Bill) Lin	Prototyper	-	iOS app development
Tatsuhiko Tomita	Lifecycle Planner	Tester	Integration test
Hamed Sadeghi	Project Manager	Tester	Testcase analysis
Dennis Xiang	II V&V	Implementer (Web)	Matching algorithm
Kurling Robinson	- Judge requirement - Prepare development environment (e.g. license)	Observe each developing features	

Figure 3 Responsibilities

Figure 3 shows our project's responsibilities. In Figure 3, The red color means our team members and blue one is our client. Here, three of us, Arik, Marco, Pin-Chih, will discontinue the development phase. Therefore, in next semester, we need more students who have skills of Web service development, Backend Software knowledge, and iOS app development experience.

			SECTION TITLE 2 University of Southern California		

Figure 4 Responsibilities for features

Figure 4 shows which of our members will be in charge of which features in terms of development. See also Figure 2 and compare it if it's hard to see this figure.

3.2 Responsibilities by Phase

Figure 3 and Figure 4 already showed our responsibilities by phase.

3.3 Skills

Figure 3 already showed our skills.

4. Approach

4.1 Monitoring and Control

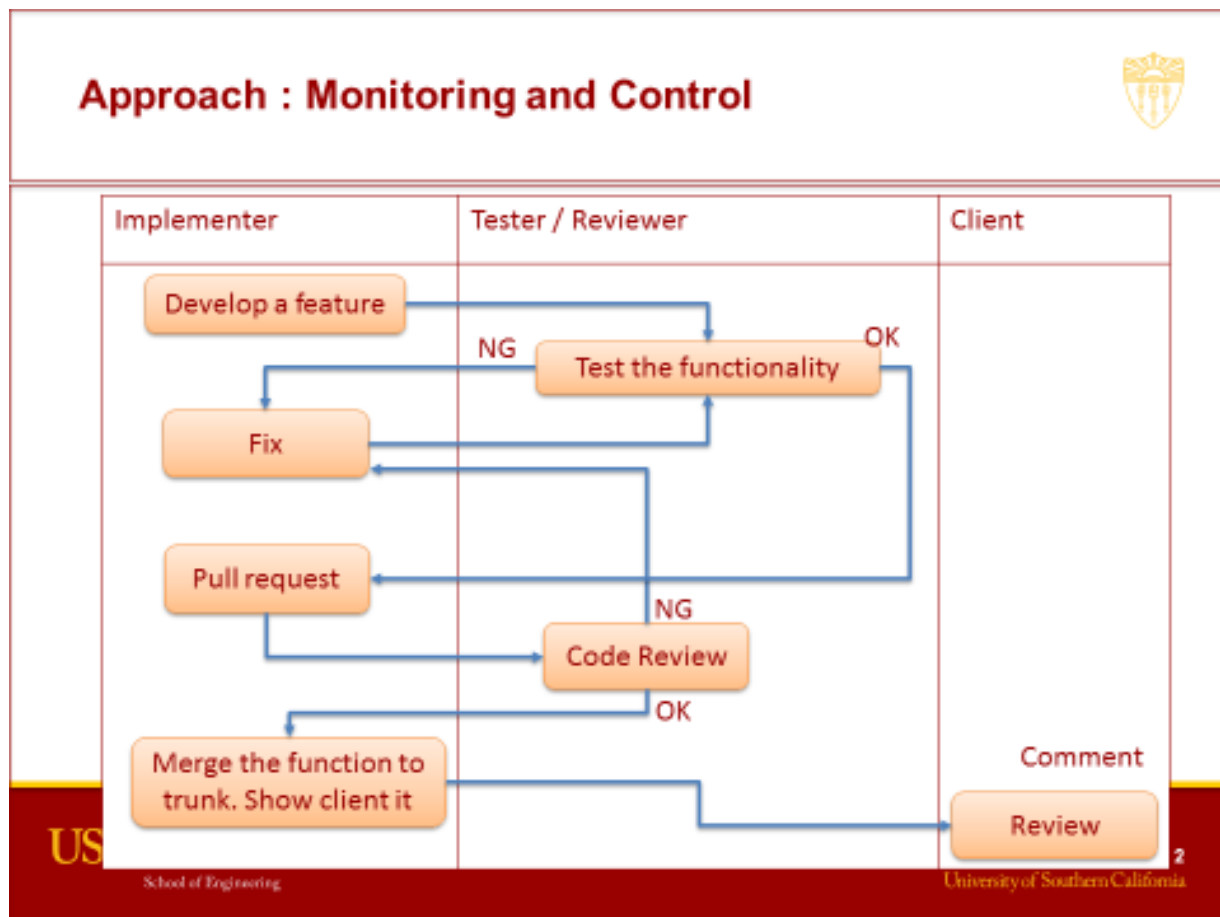

Figure 5 Monitoring and Control

This is our approach to assure the quality of our code. When an implementer finish developing a feature function, it will be tested. And they fix some bugs. When it passes the test, he can pull request. And other members have to review their code. In other words, the code cannot go ahead unless someone reviews it. If it's OK, they merge the function to main branch. And explain it to the client. And client will give us some feedback. By doing this approach, we think we can maintain the quality of our code before it goes to clients.

4.1.1 Closed Loop Feedback Control

Figure 5 already showed our feedback control strategy.

4.1.2 Reviews

Figure 5 already showed our concept for reviews.

Updated

Handover plan (From discontinuing member)

- Perform code review (after submitting DCR package)
 - file / directory structure
 - how to deliver
 - compile / upload app as testify
 - API sequence for some key use cases
 - login and see home page
 - find mentor
 - how to debug / use dev. tool
 - configuration management (github)
- Document above information
 - make it available at TRR / OCR

USC Viterbi
School of Engineering

SECTION TITLE | 2
University of Southern California

Figure 6 Handover review

Since some of us will quit this project at the end of the 1st semester, we need to perform a review for the code that they've created. Figure 6 contains what we do in that review. We also create documents that include those information and it will be available at the end of this project when we will handover our code to the client.

4.2 Methods, Tools and Facilities

Approach : Methods, Tools, and Facilities

Updated

- **Communication**
 - Basecamp : Obtain information from client
 - Slack : Within team members
- **Development**
 - Github : Version control, Code review
- **Project Management**
 - Asana / SmartSheet : Manage progress / plan
- **Test**
 - Jenkins : Integration test
- **Guidelines**
 - Coding : **Swift Style guide**

SECTION TITLE | 2

University of Southern California

Figure 7 Methods, Tools and Facilities

Figure 7 shows methods or tools to manage our project. In terms of communication, we use Basecamp, that is used to obtain information from our client. We also use Slack to communicate within team members. For development, we use github not only for version control but also for code review as explained in 4.1. We use both Asana and SmartSheet for project management. Asana for detailed communication for each capability and SmartSheet for overall progress / plan management. We're still investigating test tools. But so far, we think we can use Jenkins for integration test. And we are still investigating the coding guideline as well.

5. Resources

Here we use COCOMO II to estimate our effort for this project. Since this project would be a small project, default value for COCOMO is set as High/Low (one level easier than nominal value).

Table 5 and **Error! Reference source not found.** show COCOMO factors that have no-default value.

Table 5: COCOMOII Scale Driver

Cost Estimation				
<div>Updated</div>				
<ul style="list-style-type: none"> Key factors for COCOMO II (Focus on development phase) <ul style="list-style-type: none"> Default value is High/Low (one level easier than nominal) 				
Module	KSLOC	Factors	Rate	Rationale
Scale Factors: 15.13				
-		PREC	Low	(unprecedented) No legacy system, no experience
Cost Drivers: 0.38 (iOS), 0.30 (Backend)				
iOS App.	7(3.5 done)	DOCU	High	Not all members will continue the project
		PCON	Low	
Matching Alg. on Backend	1	PLEX	Low	Unfamiliar with Database/Web Service
Both	-	SITE	Very High	Can communicate with clients; DEN student lives in the same area

In scale driver, we set PREC as low since there is no legacy system and we don't have experience that much.

Regarding to Cost drivers, Document and Personal continuity for iOS application would be high and low because not all members will continue this project.

PLEX for Backend system would be low because we are unfamiliar with Database/WebService. However, SITE is very high, since our client comes to USC once a week. So we can communicate with him easily. Also we can meet DEN student as well.

Here is the result of COCOMO.

- Estimated SLOC : 4.0K (Mobile: 3.5K (remaining), Web: 1.0K)
- Effort : 5.2 (Person Month) (4.2 for iOS and 1.0 for Backend)

- Tailored Effort for our project : $5.2 \text{ PM} * 152/100 = 7.9 \text{ PM}$
 - o $1\text{PM (COCOMO)} = 152 \text{ hours}$, $1\text{PM(CS577)} = 100 \text{ hours}$
- Total hours we need : $7.9 \text{ PM} * 100 \text{ hrs/PM} = 790 \text{ hrs}$
- Hours each of us has : $12 \text{ hrs/week/person} * 10 \text{ weeks} = 120 \text{ hrs/person}$
- Estimated number of members : $790 \text{ hrs} / 120 \text{ hrs/person} = \mathbf{6.58 \text{ persons}}$

Since we are student, we only spend 100 hours / person month. But COCOMO estimated the effort (Person Month) as 152 hours / PM, therefore we need to recalculate the effort, 5.2 PM, to our number, 7.9 PM. This means we use 790 hours for this project in total.

We will spend 12 hours per week per person and it will continue for 10 weeks for developing phase, that means each member has 120 hours.

The total amount time divided each person's time is equal to the number of persons that we need. This value is within range of the number of our team members.
